To achieve the most trouble-free operation from your AP 320 series Merchandiser, it is recommended that this service manual be thoroughly read and the instructions followed pertaining to installation, servicing and maintaining of the unit.

Should you have questions pertaining to this manual or the vendor, please contact your AP distributor or write directly to:

Technical Service Dept.

WARRANTY

Automatic Products (AP) expressly warrants these automatic merchandisers (the "Unit"), manufactured by it, to be free under normal use and service from defects in material or workmanship for a period of two (2) years from the date of delivery of this Unit to the original purchaser. This warranty extends only to the original purchaser of the Unit. The exclusive remedy for this warranty is limited to the repair or replacement, at AP's sole option, of any part or parts of the Unit that are returned to AP or to the authorized dealer or distributor of AP from whom the unit was purchased with all transportation charges prepaid, and which, on AP's examination, shall, conclusively appear to have been defective. This warranty does not:

- a. extend to any Unit, or part thereof, that was subjected to misuse, neglect, or accident by other than AP after its delivery to the original purchaser;
- b. extend to any Unit, or part thereof, that was modified, altered, incorrectly wired or improperly installed by anyone other than AP or used in violation of the instructions provided by AP;
- c. extend to a Unit which has been repaired or altered by anyone other than AP or authorized dealer/distributor;
- d. extend to a Unit which has had the serial number removed, defaced or otherwise altered;
- e. extend to plastic or glass windows, lamps, fluorescent tubes and water contact parts;
- f. extend to any unit used outdoors
- g. extend to accessories used with the Unit that were manufactured by some person or entity other than AP.

AP DISCLAIMS ALL OTHER WARRANTIES OF ANY KIND AS TO THE UNIT AND ALL WARRANTIES OF ANY KIND AS TO ANY ACCESSORIES. THIS DISCLAIMER OF WARRANTIES INCLUDES ANY EXPRESS WARRANTIES OTHER THAN THE LIMITED WARRANTY PROVIDED ABOVE AS TO THE UNIT AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE AS TO THE UNIT AND ANY ACCESSORIES. UNDER NO CIRCUMSTANCES SHALL AP BE RESPONSIBLE FOR ANY INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES, LOSSES OR EXPENSES ARISING FROM OR IN CONNECTION WITH THE USE OF, OR THE INABILITY TO USE, THE GOODS FOR ANY PURPOSE WHATSOEVER. No representative of AP or any other person is authorized to assume for AP, or agree to on the behalf of AP, any other liability or warranty in connection with the sale of this Unit.

AP reserves the right to make any changes or improvements in its products without notice and without obligation, and without being required to make corresponding changes or improvements in Unit theretofore manufactured or sold.

This manual is divided into six

1. Unpacking and Installation.

2. Components.
3. Quick set up Guide.
4. Advanced set up and Operating system.
5. Parts.
6. Troubleshooting.

WATCH THROUGHOUT THE MANUAL FOR THIS SPECIAL ♦ DIAMOND MARK. THIS INDICATES A POINT OF SPECIAL INFORMATION OR A HINT THAT WILL ASSIST YOU IN SETTING UP, OPERATING OR TROUBLESHOOTING THE MACHINE.

CAUTION: Certain procedures in both the operating section and the service section require that voltage be on in the machine. Only trained personnel should perform this function. Exercise extreme caution while performing these procedures. These procedures will be marked with the lightening bolt symbol as it appears at left.

CAUTION: Certain procedures in both the operating section and the service section requires a qualified trained technician to perform the particular task at hand. These procedures will be marked with the exclamation symbol as it appears at left.

features of the AP 320 food/frozen merchandiser

STANDARD FEATURES

- Up to 80 selections.
- Multi drop buss capabilities.
- Extensive diagnostics capabilities.
- Friendly text based interface.
- Configuration upload and download capabilities.
- User programmable function keys.
- Flexible spiral spacing for large products.
- Eight point star drive motor.
- Four security levels.
- Six languages.
- Machine reset capability.
- Real time clock.
- Personal computer interface.
- Printer interface.
- Chime.

PRICING

- Global pricing by machine or by shelf.
- Extensive discounting capabilities.
- Shutdown capabilities.
- Combo vends.
- Product codes.
- Programmable spiral count.
- Upload and download capabilities for pricing and set up.
- Programmable maximum payout.
- Extensive accountability, including all discounts and free vends.

SCROLLING DISPLAY

- User friendly scrolling display to help with the selection process and provide customer feedback.
- User programmable point of sale and
- Operational messages.
- 20 character display.

OPTIONS

- Golden Eye Guaranteed Delivery System
- Point of sale window.
- Delivery bin cushion.
- Base kit.
- Lexan window.
- MasterMenu™ online software.
- Transportable memory unit.

NOISE LEVEL:

Operates at less than 70 dB(A)

ACCEPTABLE AMBIENT OPERATING TEMPERATURE RANGE

All equipment manufactured by Automatic Products is designed to work properly in a temperature range of 10°C to 38°C (50°F to 100°F) in still air (75% R.H. non-condensing). The machine is being stored in a temperature range of -18°C to 68°C (0°F to 155°F).

SPECIFICATIONS	310 DOMESTIC	310 EXPORT	320 DOMESTIC	320 EXPORT
Height	72" / 183 cm	72" / 183 cm	72" / 183 cm	72" / 183 cm

Low Side Test Pressure	N/A	N/A	162 psi	162 psi
Shipping Weight	190 lbs / 86 kg	190 lbs / 86 k	800 lbs / 363 kg	800 lbs / 363 kg

The AP 320 Series is assembled and packed so that a minimum amount of time is necessary for preparation to install it on location. The following steps are recommended to insure correct unpacking.

1. **Shipping Damage:** Thoroughly inspect the exterior of the carton for damage which may have occurred during shipment. Report any damage to delivering carrier and follow their instructions.
 2. Remove staples from lower edge and those at top of carton, and slit carton vertically at the taped corner. Open and remove carton. Remove the remainder of the packing material. On machines shipped with lock in place, the keys are taped inside the coin return.
 3. **Remove Vendor With A Fork Lift Truck:**
Remove the carton from the vendor. From the front of the vendor tip the vendor backward and run forks under the cabinet.
 4. **Removing Vendor Without A Fork Lift Truck:**
Remove the carton from the vendor. Break off the thin piece of board behind the rear legs. From the front of the machine tip the vendor back enough to clear the lower legs from the holes in the front board. Push the machine back off the base. Remove the pallet.
- NOTE: Because the weight concentration is toward the back of the cabinet, trucking and lifting should be done from the back. CAUTION should be taken when trucking from side.**
5. On machines with lock in place, unlock, and turn handle to open door. When no lock is furnished, remove tape and turn handle. Swing door to its full open position.
 6. Remove all packing tape and paper from various areas of machine and the shipping strap.
 7. **Warranty:** The warranty card is attached to the cover of this manual. It must be filled out in full and mailed at once to insure coverage.

◆ **IMPORTANT:** A set of anchoring brackets are sent with each machine. The kit is located in the bottom of the machine complete with instructions. It is recommended that this kit be installed to prevent shifting of the machine.

8. **Air Deflector:** Remove the air deflector from the delivery bin. Loosen to four screws holding the screen on the back of the machine, place the slotted holes in the air deflector over the screws and push down, re-tighten the screws.

CLEANING & MAINTENANCE

The 320 Series Merchandiser will do the best merchandising job for you if it is kept clean. The amount of cleaning your machine will require will vary from location to location depending on the environment. We suggest that a thorough cleaning be performed at least twice a year in a clean environment, in addition to this, light cleaning that should be performed each service. The display windows can be cleaned with any good glass cleaner. The exterior and interior surfaces should be cleaned with warm water and mild detergent (food grade). Rinse thoroughly and dry all surfaces. Always use a clean lintless disposable towel for cleaning. There is an option in the software to perform a manual defrost (see the operating system section of this manual for instructions).

The main product shelves can be best cleaned with the spirals and product spacers removed. Refer to page 1.03 for removal of spirals and removal of the product spacers.

Clean the acceptor on the changer frequently as accumulated dirt in this area can cause coins to hang or not be accepted. Follow recommended cleaning procedures as described by the manufacturer.

◆ It is extremely important that the air intake screen for the refrigeration unit is cleaned weekly and that no product is stored in this machine blocking this screen or the condenser unit. This screen is located toward the front and center of the machine floor.

installation

Leveling the Machine on location is important for the machine to function properly. The four leveling screws in the legs are the means of leveling the machine. After positioning the machine, level machine in front to rear and right to left directions. After leveling, turn front right (lock side) leveling screw in about one-half turn to drop this corner slightly to make the door easier to close and lock.

Voltage and Polarity Check. It is important that this machine is hooked up to the proper voltage and polarity. Using a voltmeter, perform the following checks from the illustration below.

◆ **NOTE:** It is imperative that the machine is on it's own 20 AMPERE SERVICE. Only the Control module may be plugged into the same service.

CAUTION: THIS MACHINE IS DESIGNED FOR INDOOR USAGE ONLY. ANY OTHER USAGE MAY VOID THE MANUFACTURERS WARRANTY.

CAUTION: THE FOLLOWING PROCEDURE REQUIRES THAT THE MACHINE HAVE POWER APPLIED AND A POTENTIAL ELECTRICAL SHOCK HAZARD EXISTS.

NOTE: Should the readings be different from above, have a certified electrician correct the problem.

For Health reasons it should be noted that cold (refrigerated) or frozen vending machines are designed for short term storage of already refrigerated or frozen product. The definitions for cold and frozen machines are as follows:

1. Cold is defined as 41°F (5°C) or lower for cold food. All food in a Refrigerated machine must have a product expiration date on the package. See your product supplier for specifics on date codes and expiration dates.
2. Slack is defined as a frozen machine set below 15°F (-9°C) or lower for slacking precooked frozen food.
3. Frozen is defined as 0°F (-18°C) or lower for frozen food. Items used in a frozen machine should have frozen designated packaging.

When installing a machine, the machine should be allowed to pull down to operating temperature before loading product into the machine, approximately 1 hour for a cold machine and 2 hours for a frozen machine. See blue page 3.01 for instructions on setting temperature.

For more information on pull down times and health control see page 2.03 of the components section of this manual.

Loading Shelves. Open door to full open position, push down on the two plastic lock levers on right and left side panel by shelf to unlock shelf, holding lever down. Grasp the shelf, under both front corners, lift front shelf slightly and pull forward until shelf reaches its stop. The shelves tilt down (do not drop) to make loading easier. Only one product shelf should be in the loading position at a time. When returning a shelf, be sure the shelf is in its full home or vend position. Begin loading with the top shelf. Move it to the loading position. The height spacing for items is greatest in this shelf and the tallest items should be placed there. Soft items, should be placed in the lowest shelf, making the drop distance as short as possible.

IMPORTANT: Product must not be forced into the spiral spaces but should fit freely. If the product is too tight, use a larger pitch spiral. The bottom of the product should be placed on top of the spiral wire that rests on the shelf surface.

Vending Large Products

The 320 Series can be configured to use two spirals to vend one product. The motor to be paired will be called the left motor, and must be an even numbered motor. Any even numbered motor may be paired. This motor must always be paired to the odd numbered motor next in sequence (i.e. motor "110" will always be paired with motor "111" and "114" always with "115"). Only motors in the same row of the machine can be paired. For more information on Motor pairs see the operating system section of this manual.

Adjusting the Stopping Position of the Spiral.

One primary difference that distinguishes the new motors from previous motors is the presence of an eight sided star at the drive hub of the motor. This permits the stopping position of the spiral to be customized by the operator to ensure the best possible delivery of product. To change the stopping position of the spiral, remove the spiral lock from the motor by pinching the shaft of the spiral lock from the back side of the motor and pulling forward on the front side of the spiral lock. The spiral lock can be reinstalled in any of eight different positions by turning the spiral lock to the position desired and pushing the shaft of the spiral lock through the eight sided star at the drive hub of the motor.

Removal of Spiral. Grasp the front of the spiral and turn it clockwise for an even numbered selection and counterclockwise for an odd numbered selection. Lift the spiral up and off of the spiral lock. When replacing a spiral attach it around the tab on the spiral lock and turn the spiral to lock it in place. Be sure the front end of the spiral is positioned properly. (see Figure 3). The spiral lock is attached between the spiral retainer tabs. Give a light forward pull on front of the spiral to check it is locked in place.

Product Spacers

A product spacer is used to reduce the width of the product area and can be used on any shelf. Spacers should fit within 1/8" of the product but should not fit tight against the product. There are four positions in each column where these spacers can be placed. To install the spacer, lift upward on the front of the spacer, align the lock ear on the rear of the spacer with the slot on the rear of the cabinet, push the spacer downward aligning the three tabs on the lower edge of the spacer with the three sets of slots on the shelf bottom. Pull the spacer forward to lock in place.

Lock Product Shelves. After all the product has been loaded be sure all shelves are returned to their vend position behind the front roller guides.

Install Proper Price Tabs into price tab holder for each selection in the main product area.

Quick Set up Guide. See page 3.01

installation

Control module Installation Instructions.

- A. Remove the 3 hole plugs from the top, inside right corner of the 320 cabinet. Once removed, remove the foam insulation (pre cut) behind the holes.
- B. Locate the front and rear lower support brackets on the bottom right hand side of the 320 cabinet. (These brackets have already been installed at the factory.) There should be a 1/8" space opening between the cabinet side and the mounting bracket, these mounting brackets can be adjusted by loosening the 2 outside bolts from each of the leg weld's on the lock side of the cabinet.
- C. Move the base of the Control module close to the 320 cabinet so the bottom left edge of the Control module rests on the support bracket. Tip the Control module to an upright position.
- D. Install the upper mounting plate using the 1/4-20 kept nuts provided. Install three in the refrigerated cabinet and Three in the control module.
- E. Put the insulation and plugs back into the 3 holes in the refrigerated cabinet.
- F. Locate the interconnect harness (communications cable) coming out of the back of the 320 and route it into the back of the Control module to the LogiCenter board and plug into the P8 connector (MDB). When using a MDB coin mech and/or bill validator these peripherals must be plugged into the pig tail coming off of the communications cable. The machine attached to the Control module is considered Cabinet 1.
- G. Level the Control module to the machine by adjusting the leg levelers.

◆ **NOTE:** Because the Control Module is top heavy and unstable, always use two people when attaching the it to the 320.

 **NOTICE**
COMMUNICATION CABLE INLET
COMMUNICATION CABLE FROM THE
320 FOOD MACHINE TO A 120 SERIES
SNACK MACHINE OR
310 CONTROL MODULE.
DISCONNECT CABLE (CONNECTIONS)
BEFORE MOVING MACHINES.

Using a Second Machine with a Control module.

If a second machine is to be operated off of the Control module, it should be placed to the right of the Control module. The second machine is free standing and does not physically attach to the Control module. Find the interconnect harness coming out of the back of the second machine and route it into the back side of the Control module to the LogiCenter board and plug the harness into the jumper coming out of the cabinet 1 interconnect harness. This machine is considered Cabinet 2.

◆ **NOTE:** The second machine being run off of a Control module **MUST** have it's own 20 Ampere service, It **CAN NOT** be plugged in on the same circuit as Cabinet 1.

Connecting a 320 to a 120 Series Snack.

A 320 machine can also be driven of a 120 Series snack in lieu of a Control module. To do this, locate the interconnect harness coming out of the back side of the food cabinet and route it into the back side of the snack (remove the triangular plate just above the line cord) to the LogiCenter board and plug into the **J8** connector.

This machine considered Cabinet 2. Only one 320 can be operated off of a snack machine. **NOTE:** The 120 and 320 **CAN** be plugged into the same 20 Ampere service if necessary.

WARNING

TOP HEAVY EQUIPMENT
CAN CAUSE
PERSONAL INJURY.
USE 2 PEOPLE WHEN
ATTACHING 310 CONTROL
MODULE TO 320 MACHINE.
ONLY INSTALL THE
310 MODULE TO A
320 FOOD MACHINE.

MasterMenu Online Software

MasterMenu Online software gives you the capability of completely setting up any 120 Series Snack merchandiser, 310 Control Module, 320 food merchandiser, or 223 Hot beverage merchandiser on your personal computer (PC). MasterMenu Online also has the ability to load complete new logic board software revisions to a machine. To load complete new software into a machine the PC must be connected directly to the machine logic board via a cable P/N 56800022 and the DEX/UCS harness P/N 680509. Software updates can be sent to you via e-mail or as a file on a floppy disk.

MasterMenu Online Installation

Personal Computer Requirements

To install MasterMenu Online, you need:

- Personal or Multimedia computer with a 486 or higher processor.
- Microsoft Windows 95 operating system or later.
- 16 MB of Ram.
- 5 MB of hard disk required.
- VGA or higher resolution video adapter.
- Microsoft Mouse or Compatible pointing device.
- 3.5 inch floppy drive

CHIP

Two pieces are required to use **CHIP**, the touch memory button (**CHIP**) and an Upload/download Harness that allows **Chip** to communicate with the machine.

Touch Memory Button (Pn 17500003)

The Touch Memory Button (**CHIP**) can be used to download to or upload from any 310 Control Module or APi 20 Series machine. **CHIP** is capable of storing all settable data from a machine, with the exception of the time and date. Once **CHIP** is programed you can take it to as many machines as you wish to upload the information stored in **CHIP**. **CHIP** can be overwritten and reused as many times as desired. **CHIP** is mounted on a key chain holder. **CHIP** can be programed from a machine that is already set up and then used to set up other machines that are to be programed identically.

CHIP can also be programed from MasterMenu Online, MasterMenu Online is a software program that allows you to set up any 310 Control Module or 20 Series machine on your personal computer (PC). This information can then be stored by filename in you PC and is always accessible for any changes you may want to make the machine in the future, including pricing. To load CHIP from your PC requires harness (Pn 17500004), included in this package.

Touch Memory Button (**CHIP**) and Upload/download Harness (Pn 16800013)

The **CHIP** upload/download harness is attached to the Logic Board (LCB) on J1 (upper right hand corner) and the other end is mounted on the swing panel in a

depression just above the display, six of these harnesses included in this package.

Chip Upload and Download Instructions.

1. Open Machine/Tower door, the display should indicate "Enter for MasterMenu".
2. Press Enter
3. Press the > until the display indicates "Configuration".
4. Press Enter
5. Press the > until the display indicates "Configuration Load".
6. Press Enter, the display should read "MasterMenu Online".
7. Press the + until the display indicates "Tmu Upload" (from Tmu to Lcb) or "Tmu Download" (From board to Tmu).
8. Press Enter
9. The display will indicate "Awaiting Download" or "Awaiting Upload".
10. Press the memory button CHIP against the socket and the display will indicate "Transfer in Progress". When the transfer is complete the display will prompt "Transfer Complete". If for any reason the transfer was unsuccessful the display will prompt "Transfer Error".

Note: To Use MasterMenu Online or Chip the Software on the Logic Board must Be at the Following Revision or Higher: 3.5 Flash Memory and 3.0 Microprocessor

Echo Package

The Echo package contains the components necessary to hook a voice synthesizer to any APi 20 series machine. The voice synthesizer will Echo the display while in service mode.

Base Kits

Base kits are available to make the vendor compatible with other manufacturers.

Delivery Bin Cushion

A delivery bin cushion is available for use when vending heavy items. This cushion is standard in the 320.

Lexan Window

A Lexan window is available as a direct replacement for the outside tempered glass.

MasterMenu Online Software

MasterMenu Online software provides the means of remotely configuring the AP 120/320 Series machines.

Conveyer Shelf

The is also a conveyer shelf available for the 320 Series machine. This shelf is a direct replacement for a standard shelf. It has a total of 4 columns and can be configured to hold from 4 to 8 selections per column.

components

Control Module Power Supply

The 115 VAC power Cord from the wall outlet comes into the machine and plugs into the back of the main junction box located on the top center of the cabinet. The voltage output to the board is 24 volts and 8 volts and is plugged into Logic Center Board.

Lighting System

There are two fluorescent lamps in the AP 320 Series machines. The lamps are located vertically on the inside of the door along the edge of the outer glass which light up the main product area. The starter is located on the underside of the bottom lamp socket of each lamp. Each lamp is covered by a plastic shield.

Main Product Shelves:

There are a maximum of five main product shelves per machine. Each selection has its own motor mounted to the back of the shelf. Every shelf has its own harness and plug for connecting to the remainder of the circuit through the cabinet receptacle, located in the rear right of the cabinet. You also have the capability to adjust each shelf ½ inch either up or down on any shelf. To do this the shelf should be removed and the cabinet back harness receptacle lowered or raised with the right & left shelf tracks.

Note: When exchanging the shelves, you will not need any parts but you will have to reprogram the machines for prices and selections.

Removal of Product Shelf:

- A. Lift up and push the lock levers toward the back of cabinet.
- B. Pull the shelf to its loading position.
- C. Grasp shelf in front and rear center. Lift front of shelf up above horizontal and pull shelf forward while lifting.
- D. To install shelf, reverse above procedure.

Delivery Bin:

This is located below the display window on the door and is mechanically operated. The linkage on the outside end of the delivery bin may require occasional lubrication. Should the door become difficult to operate, place a small amount of grease on the arm tracks.

Removal of Delivery Bin:

- A. Remove the screws from the sides of the delivery bin.

These screws fasten into the lower door brace and remove the two screws and brackets at the top of the delivery bin.

- B. Grasp delivery bin on both sides and lift up and pull back. Should the bin be tight, rock it by lifting on one end, then the other.

Replacement of Delivery Bin:

- A. Locate lip on front edge of delivery bin over lower edge of opening in door and behind trim. Press down along lip to make sure it is fully engaged between door and trim.
- B. Install the four screws and two brackets, to secure bin to door.

Heated Glass

The glass on the inner door is a double pane, heated, thermal pane. There is a connector on the bottom right hand side of the glass. The glass receives power for the heater strip through this connector from the junction box.

DEX/UCS

The AP 310 supports DEX/UCS Communications Protocol - NAMA Vending Industry Data Retrieval Standard. The machine will automatically recognize the DEX/UCS device when it is plugged into the control board and will recognize when the device initiates the communication protocol. The transmission/reception of data to the device will then take place automatically.

Baffle Door

The baffle door is located above the delivery bin and extends out from the bottom of the main product area. The purpose of the baffle door is to seal the area between the refrigerated cabinet and the delivery bin. Each time a selection is made the baffle door is opened before the product is delivered and is closed after the product has been delivered. The baffle door is opened and closed by a motor mounted toward the back left hand side of the machine just above the compressor. The baffle door can be re-opened one time after a vend by pressing the coin return.

The Chime

The chime will sound when the following events occur:

- Three times when an invalid key sequence is entered from either the front panel or the MasterMenu™ Keypad.
- Three times when the customer enters an invalid key sequence from the front panel.
- Five times when the customer has won a free vend due to WINNER MODE.
- Five times when the customer attempts to purchase a sold-out item as determined by spiral selection.
- A single time to indicate the acceptance of an action by the control system.

Power Interlock Switch

The interlock switch is located on the bottom right corner of the machine. When the door on the machine is open the interlock breaks the power (hot and neutral) going into the refrigerated cabinet control box. Power for the FDB comes from the LCB via the interconnect harness and this power is not interrupted by the interlock switch.

DEX/UCS

The AP 120 supports DEX/UCS Communications Protocol - NAMA Vending Industry Data Retrieval Standard. The machine will automatically recognize the DEX/UCS device when it is plugged into the control board and will recognize when the device initiates the communication protocol. The transmission/reception of data to the device will then take place automatically.

Printer Support

The machine is able to print to a 40 character wide printer connected to the serial port. The communication is as specified by the user in the Printer Setup Menu. The machine uses only standard printer control codes to maximize the number of possible supported printers. The machine is able to print any of the following types of information set by a menu item in the MIS Menu heading:

- MIS Data
- Machine Setup/Configuration Parameters
- Diagnostic Information

When an attempt is made to output data to the printer without a printer connected, an error message will be displayed indicating that the printer is not connected.

The 20 Series Machines Support the 24V Micromech, executive, and MDB protocols for Coin Mechs, Validators and Card Readers.

NOTE: DO NOT ATTEMPT TO OPERATE TWO DIFFERENT PERIPHERALS SIMULTANEOUSLY. FOR EXAPMLE: MDB WITH PULSE OR MICROMECH. Peripherals in Column 1 and 2 can work together and columns 4 and 5 can work together.

	Micro Mech 24V 15 pin	Pulse Validator 24V	Executive	MDB Coin Mechanism	MDB Bill Validator
Mars	TRC-6010XV VN4010XV	VN2502-U5E VN2512-U5E VFM1-L2-U4C VFM3-L2-U4C	540 560	TRC-6510 TRC-6512 VN-4510	VN2502-U5M VN2512-U5M
CoinCo	9302 LF USD-L701 USQ-L701	BA32SA BA32R		9302-GX USQ-G701 USO-G703 USQ-L701	BA32SA** BA32R
Conlux	USLX-001-01F			USLZ-004-01F CCM 5 G	USLZ-004-01F

The AP 20 Series will automatically determine at power up which peripherals are connected and configure itself accordingly.

Temperature Monitoring

To display the temperature of all food and/or frozen cabinets in an installation depress and hold the “C” (for temperatures to be displayed in Celsius) or “0” (for temperatures to be displayed in Fahrenheit) button on the front panel keypad. After three seconds, the temperatures (in all refrigerated and frozen cabinets present in the installation) will display for three (3) seconds and continue to do so until the button is released.

The Refrigeration System

The refrigeration system is comprised of a 3/4 horse compressor and is a hermetically sealed system (no service ports). The refrigerant used in the refrigeration system is 404a and the charge is 23 ounces. The Compressor is turned on and off by a relay contained in the refrigerated cabinet junction box. This relay is energized by the Food Driver Board (FDB). The temperature sensor is plugged into the P2 connection of the FDB. The entire refrigeration assembly comes out in one piece by removing the two screws (to the right of the condenser) fastening the refrigeration assembly to the cabinet bottom.

◆ CAUTION: Because of the weight of the refrigeration assembly it should be removed by two people.

Refrigeration Control

The refrigeration system in the AP 320 cabinets is controlled by the Electronic control system (ECS) according to the temperature range selected by the operator in the MasterMenu system. The temperature readings from the temperature sensor is accurate to 1°F. The temperature sensor data is monitored and the readings averaged over time. The cabinet temperature is checked once every 5 seconds. Using the Set Temperatures menu item, the cabinets may be designated as Ambient, Food, or Frozen. When a cabinet is designated as Ambient, the Control System will not control the temperature in that cabinet and the refrigeration system in that cabinet will be disabled if it exists. Temperature readings will still be available for cabinets designated as Ambient. When a cabinet is designated as Food or Frozen, the Control System will attempt to maintain the temperature in the cabinet to within 3° F of target temperatures specified in the Set Temperatures menu item during normal operation (this is fixed at 36°F (2°C) for Food and is settable from -15°F to +10°F (-26°C to -12°C) for Frozen). To accomplish this, the refrigeration unit will be turned on when the temperature exceeds the appropriate target temperature by more than 3°F for 3 seconds during normal operation. The refrigeration unit will then remain on until the temperature falls 3° below the target temperature for 3 seconds.

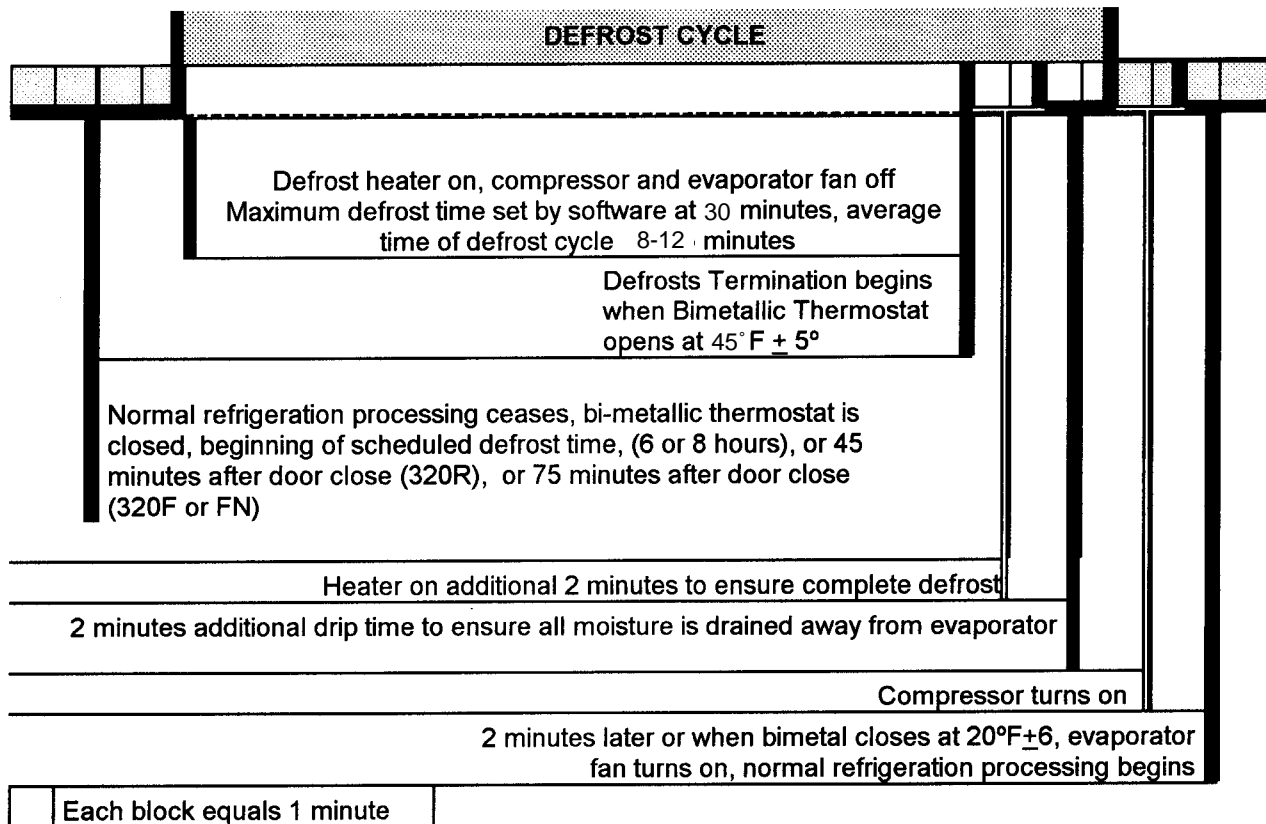

Health Monitoring

The AP 120 and/or Control module allow for accurate monitoring of all refrigerated and/or frozen cabinets in the installation. This also allows for shutdown of each cabinet individually by the machine without impact to the others. When the machine shuts down a cabinet due to an out of tolerance temperature, the light in that cabinet is turned off, all selections in that cabinet disabled, and the display updated to indicate “CABINET X OUT OF SERVICE” (where “X” is “1” if the temperature sensor in Cabinet 1 detected the out of tolerance condition, or “2” if the temperature sensor in Cabinet 2 detected the out of tolerance condition). A temperature sensor is present in each refrigerated and/or frozen cabinet. The Pull down period describes the time elapsed between a cabinet Power Up (Door Closed) and the point in time when the cabinet temperature first reaches the target temperature. Health processing is suspended during the Pull down period. If the Pull down time period exceeds 75 minutes in a Frozen cabinet or 30 minutes in a Food cabinet however, vending will also be disabled in that cabinet for health reasons. Vending will be allowed again after the door to that cabinet has been opened and closed. The Pull down period does not apply to the Ambient cabinets. If at any time during normal operation after an initial Pull down period, the temperature in a Frozen cabinet rises above the set target temperature by 10° F for more than 15 continuous minutes of temperature readings, vending will be prohibited in that cabinet. If at any time during normal operation after the initial Power Up Pull down period, the temperature in a Food cabinet rises above +45° F for more than 5 continuous minutes of temperature readings, vending will be prohibited in that cabinet. The cabinet temperature control processing will remain unaffected by this vending state. An error message will be recorded indicating the Health Time-out occurred. Vending will be allowed again after the door to that cabinet has been opened and closed.

Defrost Processing

The refrigeration units in the 320 cabinets are defrosted by the refrigeration control system at regularly scheduled intervals based on the Defrost Interval, starting from the Defrost Time selected in MasterMenu™. A defrost cycle will begin with the compressor and condenser fan turned off and the defrost heater on. The heater will remain on until the Defrost Thermal switch indicates that the temperature of the air around the refrigeration coils has reached the desired temperature. The compressor will then be turned on two minutes later. Normal refrigeration processing then resumes. A Defrost cycle will also occur

75 minutes after the door is closed in a Frozen cabinet or 45 minutes after the door is closed in a Food cabinet. If the cabinet is a Food cabinet and the compressor has not yet reached Pull down, the Defrost cycle will be delayed until it reaches Pull down. Another Defrost Cycle will occur either 6 or 8 hours later where 6 or 8 is the number of hours specified in the Defrost Interval field of the Setup Defrost Menu Item in MasterMenu™. If a scheduled defrost is to occur before 4 hours after the Power Up defrost is complete, it will be delayed until 4 hours after the Power Up defrost is complete. All subsequent scheduled defrosts will occur at their normal times.

Manual Forced Defrost

Enter Master Menu, Configuration Menu, Setup Defrost menu item for specific cabinet, Press F2, compressor will turn off and a defrost cycle will begin following the sequence above.

Normal Temperature Operation:

With temperature set at -15°F, the following three conditions indicate a correctly operating refrigeration unit:

- 1) Unit should reach that temperature within 1 hour.
- 2) After reaching that temperature, Compressor On cycle should not exceed 35 minutes.
- 3) During a defrost cycle, cabinet temperature should not rise above 0°F.

Current Readings:	120V Operation	230V Operation
Stand-by	1.5A ± .5A	.75A ± .5A
Compressor On	12A ± 1A	7A ± .5A
Defrost Cycle	7A ± .5A	2.5A ± .5A
Defrost Heater		
Resistance	23 ohms ± 3	85 ohms ± 6

Vend Motors

The vend motors used in the AP 320 machines have been specifically developed to operate with the APi MasterVend™ Control System. One primary difference that distinguishes the new motors from previous motors is the presence of an eight sided star at the drive hub of the motor. This permits the stopping position of the spiral to be customized by the operator to ensure the best possible delivery of product. Motors used in the 120 & 320 are of the fast trac style, with all electronics required to correctly operate the motor contained inside the gear case or the motor housing and no external control board. Each of the motors used with the MasterVend™ Control System will have two terminals. The two terminals continue to be used to identify the shelf and column (selection) to be vended.

SHELF WIRING DIAGRAM

Each motor requires two wires to operate correctly. These wires are: shelf common, and selection.

Each selection on a shelf has the same common shelf wire - all shelf harness use the wire #12 as a shelf common. This corresponds to the selected shelf wire in the cabinet harness. The terminal for the shelf common in the harness is the smallest of the two.

Selection numbers are assigned from left to right, starting with selection 0. Each selections number corresponds to the number of the wire for that selection.

Figure 2.4

Selection System

The selection system used with the MasterVend™ Control System is different from all previous alpha-numeric systems we have manufactured. The eleven digit selection panel (see figure 2.4) is located on the front control bezel and consists on the numbers 0 through 9 and the letter C, which is defined as a clear button. The selection system used with the MasterVend™ Control System is all numeric and uses three digits to identify all the selections. The first digit is used to determine which cabinet is selected, the second digit determines the shelf selected, and the third digit, the selection on that shelf. The left or first selection on each shelf is designated as selection 0, and on a ten select shelf the selection numbers would be increase by one, so that the right hand selection will be selection 9. The numeric keys on the selector panel can be used to enter numeric data any time it is required during setup or maintenance of the equipment.

Wildcarding

Anywhere in the programming where you are allowed to enter selection numbers you can use wildcarding. Wildcarding makes use of the * key on the MasterMenu keypad. The * key in any postion means all. The following examples are using wildcarding for pricing the machine:

Entering *** will price all cabinets, all shelves & all selections to the price shown.

Entering 1** will price cabinet 1, all shelves & selections to the price shown.

Entering 11* will price cabinet 1, shelf 1, all selections to the same price.

MasterMenu™ Keypad

The MasterMenu™ keypad (pictured below) is located on the front of swing out panel directly below the selection keypad. The MasterMenu™ keypad is only active when the door is open, so even in the event of vandalism to the control bezel, no access to the control functions is permitted. The MasterMenu™ keypad consists of seven function buttons, a  key, four coin payout buttons and the eight keys used to operate the MasterMenu™ functions. The entire keypad becomes active once the machine door is opened.

Function Buttons

The seven function keys (F1-F7) are assigned to specific pre-determined menu headings, primarily for route service personnel. See page 4.02 for specific menu heading for each of the function keys.

Pressing the  key before one of the function keys  through  are assigned to the second level of menu headings.

Coin Payout Buttons

The four coin payout buttons are used to pay coins out of an L+ or a standard US (dummy mech). The four coin payout buttons are , ,  and . The four coin payout buttons may also be used to enter pricing information while assigning prices. For example, to enter a price of \$.65, pressing the  key twice, the  key once and the  key once, would result in .65 appearing on the display. See the price setting section for additional information.

The  key is used for exiting the current menu without making any changes prior to commitment. Note: Closing the main cabinet door will have the same effect as if the user pressed the  key and causes the machine to exit the MasterMenu™ System and return to Operational Mode.

The  key provides a dual purpose operation. It provides the a mechanism for entering a menu. It also provides a means to commit insertions/modifications/deletions made in a menu item.

The  and  keys are used for incrementing and decrementing the available choices in a menu.

Note: Anywhere in this manual that the  or  keys are defined to sequence through numeric data, the front panel may be used as an alternate input source.

The  and  keys have a dual purpose operation. They provide a means to select the menu heading immediately to the left or right of the current menu heading. When inserting data within a menu, these keys also provide a means to move the cursor from its current position to the position directly to its left or right.

The  key is used to delete the character on the current cursor position, shifting all subsequent characters to the right of that position left by one.

The  key provides a mechanism to insert a character to the left of the current cursor position, shifting all characters to the right of that position (including the current character) right by one.

Note: Depressing a function key will not cause you to enter the MasterMenu™ System.

components

Control System and Boards

The MasterVend™ Control System consists of up to three different boards, depending on the configuration. All Model 120 and all Control modules consist of the LogicCenter board (LCB) and the display board. All 320 machines also contain a Food Driver Board (FDB).

LogiCenter Board (LCB)

The LCB interfaces with the FDB (when used), display board, selector panel, MasterMenu keypad, coin mechs, bill validators and all other peripherals. The LCB also stores all the programming and MIS information. In addition the LCB supplies power to the FDB. (ESD sensitive)

Food Driver Board (FDB)

This board contains all the temperature monitoring functions for cabinet that it is contained in, and communicates with the LCB via a 6 wire computer level interconnect harness. The FDB has three LEDs on it and the status of the FDB can be determined by observing these LEDs. The three LEDs will give you the status of the communications between the FDB and LCB, if the board is currently telling the refrigeration unit to run, and if the board is currently telling the machine to go through a defrost cycle. (ESD sensitive)

The Food Driver Board is located on the front face of the Relay Box for the compressor assembly. This board controls the function of all the refrigeration components along with providing the circuits for the vend motors and the baffle delivery door. There are also two jumpers for default settings of this board. These jumpers are a set of three pins which will have only two pins connected at any one time. The connection between the two pins is made by a small black cap, which slides over the pins in use. The black caps are identical, and should not be removed from the board for any reason. The two jumpers are the Cabinet selection jumper and the temperature control jumper.

Cabinet Selection Jumper

The position of this jumper identifies which cabinet is named CAB1 (Cabinet 1), or CAB2 (Cabinet 2). These are abbreviated on the FDB board cover decal (pictured below) as **C1** and **C2**. Cabinet 1 will contain the selections 110 through 157, and Cabinet 2 will contain the selections 210 through 257. All machines are shipped with this jumper installed on CAB1. This jumper should be changed only if you are connecting a second cabinet to a 310 Control Module or a 120 Snack.

Temperature Control Jumper

The second jumper on the board controls the default setting for the temperature in the event the FDB loses communication with the LCB. This will hold the cabinet temperature at the setting indicated by the jumper. A jumper set at **"R"** will hold the temperature at 36°F (2°C), and a jumper set at **"F"** will hold the temperature at -15°F (-26°C). If you change the temperature in the **SET TEMPS** menu item, you must also change the position of the jumper to the corresponding position. The position of this jumper can be verified through the hole in the board cover.

The Front Panel Display

The display is capable of displaying 20 alpha-numeric characters. The supported character set includes:

- Upper case alphabetic characters "A" through "Z"
- Numeric characters "0" through "9"
- Special characters: (,), [,], ., ', -, =, \$, /, \, *, ^, +, , , ", ?, _.

Open Control module door
Open swing panel

SET MOTOR PAIRS

Depress and hold down the ★ key while pressing F 1 on the MasterMenu keypad.

The display will indicate Motor Pairs, press **ENTER**.

Use the **<** and **>** keys to move between selection and pair state.

Use the **+** and **-** key to change the paired state of the motor.

Use the selection buttons to enter the desired selections for the paired state currently displayed.

Press **ENTER** to pair displayed motor.

Press **ESC** to exit.

Note: Using the **+** and **-** keys to change the selection # will show the current paired state of the motor.

SET TEMPS

Depress and hold down the ★ key while pressing F2 on the MasterMenu keypad.

The display will indicate Set Temps, press **ENTER**.

Use the **<** and **>** keys to move through cabinet, temperature range, target temperature and temperature scale fields.

Use the **+** and **-** keys to increase or decrease the currently selected field. Pressing the **ENTER** key when the desired cabinet, temperature range, target temperature, and temperature scale are displayed will cause the cabinet to be set to the displayed settings.

Press **ESC** exit.

Note: If you are NOT using a second cabinet, you do not need to set Cabinet 2.

SET PRICES

Press the F4 on the MasterMenu keypad

Press **ENTER** to access **SET PRICE** menu. **<**

Press **>** 1 time to price.

Using the selection buttons, enter desired price, Calculator style.

Press **<** 1 time to selection.

Using the selection buttons, enter desired selections at the price shown.

Repeat the above process for all additional prices to be set.

ESC to exit.

NOTE: See page 1.02 for health regulations setting temps.

ACTIVATE THE GOLDEN EYE (OPTIONAL)

Press enter the display will prompt: "MIS"

Press **>** to "Configuration" and press enter

Press **>** to scroll to "set Golden Eye - N"

Use the **+** and **-** key to change between N (no) and Y (yes). Pressing "enter" when the Y is flashing will enable Golden Eye.

The Display will prompt: "Goldeye Sel - N"

Press **>** 1 time this will cause the N (no) to start flashing.

Press **+** key, this will change the N to Y (yes).

Press **>** 1 time this will cause the last digit in the selection number to start flashing.

Key in on the selection pad the selections to set to work with Golden Eye. After each selection number that is keyed in you will hear a beep. The beep indicates that the selection number has been accepted. Pressing C/CE at any time will clear the display as if it were a backspace.

NOTE: Pressing 1** will enable Golden Eye for the entire machine. If using a snack plus a 320 pressing 2** will enable Golden Eye for the entire machine.

To remove selections from working with Golden Eye follow the same procedure but key in the selections with the state of the motor set to N (no).

quick set up reference - electronics

Food Driver Board

The Food Driver Board is located on the front face of the Relay Box for the compressor assembly. This board controls the function of all the refrigeration components along with providing the circuits for the vend motors and the baffle delivery door. There are also two jumpers for default settings of this board. These jumpers are a set of three pins which will have only two pins connected at any one time. The connection between the two pins is made by a small black cap, which slides over the pins in use. The black caps are identical, and should not be removed from the board for any reason.

Cabinet Selection Jumper

The position of this jumper identifies which cabinet is named CAB1 (Cabinet 1), or CAB2 (Cabinet 2). These are abbreviated on the FDB board cover decal (pictured below) as **C1** and **C2**. Cabinet 1 will contain the selections 110 through 157, and Cabinet 2 will contain the selections 210 through 257. All machines are shipped with this jumper installed on CAB 1. This jumper should be changed only if you are connecting a second cabinet to a 310 Control Module or a 120 Snack.

Temperature Control Jumper

The second jumper on the board controls the default setting for the temperature in the event the FDB loses communication with the LCB. This will hold the cabinet temperature at the setting indicated by the jumper. A jumper set at "R" will hold the temperature at 36°F (2°C), and a jumper set at "F" will hold the temperature at -15°F (-26°C). If you change the temperature in the **SET TEMPS** menu item, you must also change the position of the jumper to the corresponding position. The position of this jumper can be verified through the hole in the board cover.

Introduction

The AP MasterMenu™ system is user friendly and provides a common look and feel across all menu items. The system allows the user to move freely through the menus and provides ease of insertion, modification, and deletion of operational parameters and data. In addition, the system provides the user with status and diagnostic messages to aid in the use and service of the machine.

Operational Mode

The Operational mode provides the machine with the ability to vend products. The machine is in Operational Mode whenever the main cabinet door of the machine is closed. Upon opening of the main cabinet door, the machine will remain in Operational Mode until the **ENTER** key is depressed at which time it will enter the Service Mode. This allows for vends to occur while the main cabinet door of the machine is open and the user has not yet entered Service Mode by depressing the **ENTER** key. This is referred to as Enhanced Operational Mode. Enhanced Operational Mode differs from Operational Mode in that the Function keys and Payout keys are active. If any key in either of these sets of keys is depressed, it will perform its function and return the machine to Enhanced Operational Mode when complete.

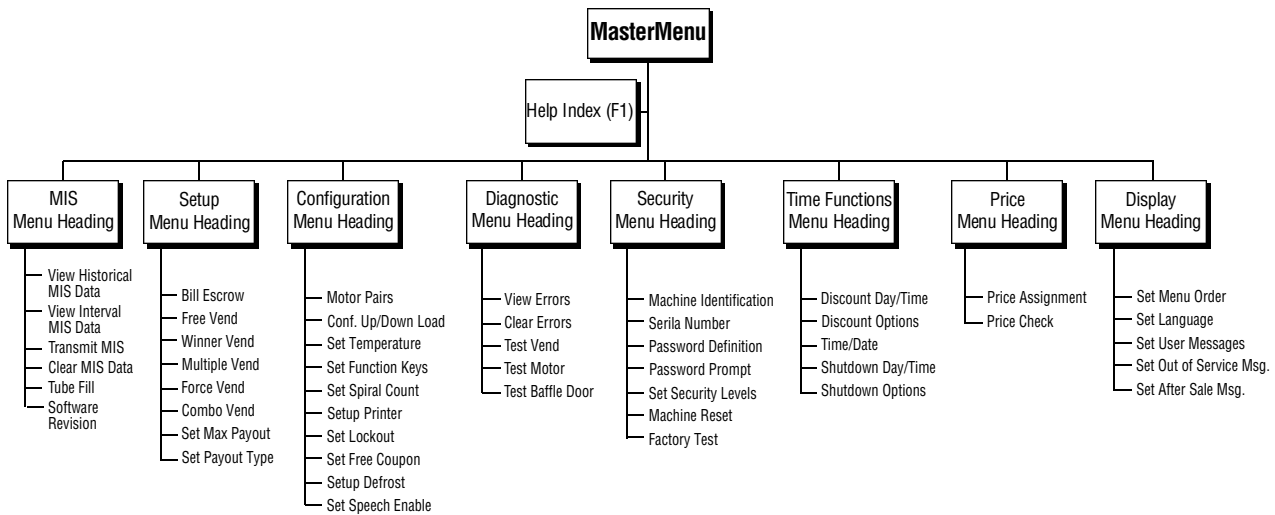

The Service Menu provides access to all configurable items in the machine as well as retrieval of MIS information. The Service Menus shall only be available when the machine is in Service mode.

Service Mode

Service Mode provides the ability to configure the machine. When the Control Module door is opened, the display indicates "ENTER FOR MASTERMENU" if no errors have been logged, or "ERRORS-NN" in the case where errors exist (where "NN" is the number of errors). The machine returns to Operational Mode whenever the main cabinet door is closed.

The MasterMenu™ System provides a set of text based Service Menus which allows interface to all functions of the machine. Menus appearing at the upper most level of the menu system are referred to as Menu Headings. Menus appearing under the Menu Headings are referred to as Menu Items.

Figure 1.1: illustrates a diagram of the MasterMenu™ System.

The following is a quick reference for the keys on the MasterMenu™ keypad, for a detailed list see page 2.05 of the components section.

-  Used to enter the character “*”.
-  The four coin payout buttons may also be used to enter pricing information while assigning prices.
-  Used for exiting the current menu without making any changes.
-  Used to choose a menu heading and to commit to insertions/modifications/deletions made in a menu item.
-  and  Used to move the cursor from its current position to the position directly to its left or right also to select the menu heading immediately to the left of the current menu heading.
-  and  Used for incrementing and decrementing the available choices in a menu .
- Note: Anywhere in this manual that the  or  keys are defined to sequence through numeric data, the front panel may be used as an alternate input source.**
-  Used to delete the character on the current cursor position.
-  Used to insert a character to the left of the current cursor position.

Note: Depressing a function key will not cause you to enter the MasterMenu™ System.

Operating System Quick Reference Index

On the bottom of each page is a quick reference index (figure 1.2). The white box indicates where you are in the MasterMenu™ System, the shaded areas can be used as a reference to move through the sections of the manual. Figure 1.2 below indicates that you would be in the diagnostics menu.

TRANSMIT MIS DATA

TRANSMIT TO DEX

Press ENTER

Use the > to PRINTER or Press ENTER to TRANSMIT TO DEX (Dex transfer is automatic on connection of dex device on software version 3.50 or higher) See table 4.2 for a list of MIS Data transferred and Dex definitions.

TRANSMIT TO PRINTER

Press ENTER then use the + or – key to toggle between SHORT LIST and FULL LIST. Press ENTER to start the print. See table 4.3 for a list of MIS data transferred to the printer.

CLEAR MIS DATA - N

Pressing the + key to toggle the N (no) to Y (yes) then press ENTER will reset the interval MIS data. It will also increase the MIS reset field by 1 reset each time a reset is done.

TUBE FILL

Allows you to fill the coin mech and the logic board will count the money as it goes in and continually track the coin mech inventory. This is the count the board uses when you choose tube leveling as a Payout type in the Setup menu heading.

NOTE: It is not necessary to fill the coin mech in this mode unless you have changed to tube leveling. To proceed press ENTER

TO = 00.00 (XX.XX

TO is the tube # of the last coin inserted (1-4, O for a non tube coin)

00.00 is the value of the coins in the tube shown.

XX.XX is the value of coins in all tubes.

SOFTWARE REVISION

Press ENTER

P030 L04.00 C117 C217

P030 is the software version of the Microprocessor on the logic board. (large chip).

L04.00 is the software version of the Flash Memory chip on the logic board. (small chip).

C117 is the software version of the Flash Memory chip on the Food Driver Board (small chip) in cabinet 1.

C217 is the software version of the Flash Memory chip on the Food Driver Board (small chip) in cabinet 2.

SETUP VIEW MIS

HTOT SALES - Y

Press ENTER and the display will prompt you with the first viewable MIS item:

Use the < or > key to scroll through the list of viewable MIS items. Press the + key to toggle the Y (yes) to (no) to N (no) if you do not want the item shown to be viewed in the View MIS Menu.

When you have finished making changes press ENTER for the changes to take effect.

The MIS data is incremented as follows:

Field	Vend Type						
	Normal	Discount Winner	Token or Winner	Discount & Winner or Token	Combo	Testvend	Freevend
#VENDS	•	•	•	•	•		•
\$VENDS (Sale Price)	•	•	0	0	•		0
#/PROD	•	•	•	•	•		•
\$/PROD (Sale Price)	•	•	0	0	•		0
#/TESTVEND						•	
#/DISCOUNT		•		•			•
\$/DISCOUNT (Amount)		•		•			• (List)
#/WINNER			•	•			
\$/WINNER (Sale Price)			•	•			
#/COMBO					•		
\$/COMBO (Discount)					•		

- Indicates which field is updated for a given vend type.

(List Price - Discount Amount if any = Sale Price)

Note: \$Winner accumulates sale prices of Winners. If the Winner is also Discounted, the vend is counted in #Discount and the discount is accumulated in \$Discount.

setup menu heading

The Setup Menu heading contains all the Setup Menu Items in the machine.

Pressing ENTER when the display indicates Setup will cause the display to be updated with Bill Escrow.

Use the < or > arrow keys to scroll through the following menu items:

Bill Escrow Free Vend Winner Vend Multiple Vend Force Vend Combo Vend Max Payout Set Payout Type

Pressing ENTER when any of the above items are on the display will give you access to that Menu Item.

Below is a detailed list of each of the above Menu Items:

Display

BILL ESCROW - N Use the + or – key to change between N, FIRST or LAST. Press ENTER to commit to any changes.
N - Disables bill escrow and all bills will be stacked. Pressing the coin return the customer will receive all change.
First - Holds the first bill in escrow and pressing the coin return will return the bill.
 (All other money added will need to be coin).
Last - The machine will accept bills to the highest vend price, pressing the coin return will return the last bill and all other bills inserted will be returned in change.
Note: Force vend overrides bill escrow.

FREE VEND-N Use the + or – key to change between N (no) and Y (yes). Press ENTER to commit to any changes.
When Free vend is set to yes the display will prompt "ALL ITEMS ARE FREE" unless overridden by a custom point of sale message.

WINNER VEND -OFF To turn on Winner vend, enter a number between 1 and 500 using the selection key pad or the + and – keys. Off is between 1 and 500. Press ENTER to commit to changes.
When a customer wins an item, credit will be returned to the customer and the display will indicate ***WINNER*** . Note:When a machine is set to free vend, test vend or the second vend of a combo vend are not counted for the purposes of determoning a winner.

MULTIPLE VEND-N Use the + or – key to change between N (no) and Y (yes). Press ENTER to commit to any changes. If you choose Y the display will prompt:
TIMEOUT - 20 This is the amount of time the customer has to make another selection before their change is returned. During this time period the customer can make a selection, add more money to make another selection or press the coin return to receive their change. If the change due back is lest than the lowest priced item in the machine, change will be returned immediately. This time is period is settable from Five to Ninety seconds. To change the time use the selection key pad or the + and – keys. Press ENTER to commit to the time period.

FORCE VEND - N Use the + or – key to change between N (no) and Y (yes). Press ENTER to commit to any changes.
When Force vend is turned on, once there is enough credit established to purchased the lowest priced item in the machine, the customer must make a purchase.
Note: Force vend overrides bill escrow and does not apply when debit cards are used.

COMBO VEND - N Use the + or – key to change between N (no) and Y (yes). Press ENTER to enter the combo vend menu item.
TIMEOUT - 20 This is the amount of time the customer has to add more money and/or make the second selection of a combo vend.
This time is period is settable from Five to Ninety seconds. To change the time use the selection key pad or the + and – keys. Press ENTER to commit to the time period.

01 XXX-YYY FREE N Use the < or > to move the flashing cursor between the fields.
01 is the combo #. Use the + or – key to scroll through the combo #, a maximum of ten is supported
XXX-YYY - XXX is the item selected by the customer, YYY is the item to be vended in combination with the customer-selected item.
Free is the discounted price of YYY when selected after XXX is selected. Any price can be set for the second item including free. To set the price use the selection key pad or the + and – keys. Free is located below 00.05 cents.
N - Use the + or – key to toggle between N (not active) and Y (active). This allows you to program in combo vends and turn then on and off as desired.

M I S MENU	SETUP MENU	CONFIGURATION MENU	DIAGNOSTIC MENU	SECURITYMENU	TIMEFUNCTIONS	PRICE MENU	DISPLAY MENU
------------	------------	--------------------	-----------------	--------------	---------------	------------	--------------

MAX PAYOUT - N	Use the + or – key to change between N (no) and Y (yes). Press ENTER to commit to any changes.
MAX PAYOUT - 01.00	When to choose Y the display will show the maximum amount of money to be paid back after a vend. To change the Maximum payback amount use the selection key pad or the + and – keys. Press ENTER to commit to the Maximum payback amount.
PAYOUT - LEVELING	<p>There are 3 payback options are fewest, MDB level 3 and leveling. Use the + or – key to change between the 3 different options. Press ENTER to commit to a payback option. Here is a discription of the three payback options:</p> <p>Fewest - This option is the factory default and will always payback the least number of coins available based on the sensors in the coin mech.</p> <p>Leveling - The board makes all the payback decisions based on how much money it thinks is in each tube. When using this option it is important that you teach the board how much money is in the coin mech (use "Tube fill" menu item) when you set up the machine.</p> <p>MDB Level 3 - The changer makes all the pay back decisions based up how much money it thinks is in the tubes. This option will only work with MDB coin mechs. All payback options will work with MDB also, you are not limited to this option with MBB coin mechs.</p>

configuration menu heading

The Configuration Menu heading contains all the Configuration Menu Items in the machine.

Pressing ENTER when the display indicates Configuration will cause the display to be updated with Motor Pairs.

Use the < or > arrow keys to scroll through the following menu items:

Motor Pairs	Configure Load	Set Temperature	Set Function Keys	Spiral Count	Setup Printer
Set Lockout	Set Free Coupon	Set Defrost	Speech Enable		

Pressing ENTER when any of the above items are on the display will give you access to that Menu Item.

Below is a detailed list of each of the above Menu Items:

Display

MOTOR PAIRS (320 only)	Allows you to pair any even numbered motor may be paired with the odd numbered motor next in sequence.
PAIR MOTOR NO N	To pair motors Press the > one time this will cause the N (no) to start flashing. Press the + key, this will change the N to Y (yes). Press the < one time this will cause the last digit in the selection number to start flashing. Key in on the selection pad the selections to be paired. After each selection number that is keyed in you will here a beep. The beep indicates that the selection number has been accepted. Pressing C\CE at any time will clear the display as if it were a backspace key. To remove motor pairs follow the same procedure but key in the selections with the state of the motor set to N (no).

CONFIGURATION LOAD	Allows the uploading or downloading of information to or from the logic board. Press ENTER and the display will prompt MasterMenu online. Use the + or – key to scroll through the following options: MasterMenu Online - is software that allows you to program a machine with a Personal Computer. See the options section of this manual for more information. TMU Upload - allows you to upload programing information to a machine for a touch memory button (chip) that has already been programed. TMU Download - allows you to download programing information to a touch memory button (Chip), for more information on chip see the options section of this manual. Press ENTER to start the upload or download process. Upon completion the display will prompt that the download is complete. If the information can't be transferred the display will prompt transfer error or transfer disconnect.
-------------------------------------	--

SET TEMPERATURE CAB1 AMBIENT --- F	Press ENTER, the display will prompt: Cab1 (Cabinet 1) - Use the + or – to change between cab1 and cab 2 (cabinet 2). Use the > to move the flashing digit to Ambient. Use the + or – to change between: Ambient (outside air temperature) Food - the target temperature (---) will automatically change to of +36 degrees Fahrenheit.The temperature is not adjustable when set to food. Frozen - the target temperature (---) will automatically change to of + 10 Fahrenheit. Use the + or – to change between + 10 and –15 Fahrenheit. Chilled - (Appears only when cabinet 1 is a snack or 128/129 Cabinet) the target temperature (---) will automatically change to of + 70 Farenheit. Use the + or - to change between + 70 and +40 Farenheit. F = Fahrenheit, use the + or – to change between F and C (Celsius) Press ENTER to commit to a temperature setting.

configuration menu heading

SET SPIRAL COUNT - N

This menu allows you program the number of spaces in each spiral. When a selection has vended all the product out of and individual spiral the machine will prompt make another selection and will beep 6 times. When the Set Spiral count is enabled and the door is opened to service the machine the display will prompt "Stock Machine N?", to reset the spiral count toggle the N to Y and press ENTER. Note: you must fill all selections each time you service the machine, change the spiral count or turn off spiral count for each selection not being completely filled to work properly.

This menu was implemented for locations with visually impaired customers. Some operators have also used this menu when vending high priced items.

Use the + or – key to change between N (no) and Y (yes). Press ENTER to commit to any changes. When Spiral Count is set to yes the display will prompt:

SPIRAL 110 00 N

Press the > two times to N (no)
Press the + or – key one time to Y (yes)
Press < one time to 00 (spiral count)
Use the selection buttons to key in the desired count.
Press < one time to 110 (selection number)
Using the selection buttons, enter the selections to be set for the spiral count shown.
Repeat the above process for all additional spiral counts to be set.

SETUP PRINTER
BAUD - 9600 N81

Press ENTER to change the baud rate, parity, data, and stop bits.
Use the < or > key to scroll through baud rate, parity, data, and stop bits. Press the + or – key to change the flashing digit.
The available parameters are:

Baud rate	300	1200	2400	6900	19200
Parity	None (N)	Even (E)			Odd (O)
Data Bits	Eight (8)		Seven (7)		
Stop Bits	One (1)	Two (2)			

SET LOCKOUT -N

Allows you to lock out specific selections when an external key switch is activated.
To enter lockout menu:
Press the > one time to N (no)
Press the + or - key one time to Y (yes)
Press ENTER and the display will prompt:

LOCKOUT SEL 110 N

Press the > one time to N (no)
Press the + or - key one time to Y (yes)
Press < one time to 110 (selection number)
Use the selection buttons to key in the selections to be locked out when the external key switch is activated. **Note: Wild Cards can be used when entering selections.**

SET FREE COUPON - N
SEL 100 N

Use the + or – key to change between N (no) and Y (yes) and press ENTER the display will prompt:
Press the > one time to N (no)
Press the + or - key one time to Y (yes)
Press < one time to 100 (selection number)
Use the selection buttons to key in the selections to be free when a coupon is used.
Note: Wild Cards can be used when entering selections.

SET DEFROST Allows you to customize target defrost time for cabinets 1 and 2. It is not necessary to set this menu it is a target defrost time only. Press ENTER and the display will prompt:

CAB 1 00:00 AT 6HRS Press the + or – key to change the flashing digit. Use the < or > key to scroll through the following:
Cab1 - Use the + or – key to Toggle between Cab1 (cabinet 1) and Cab2 (cabinet 2).
00:00 (midnight) - Is the target time for the defrost cycle. Use the + or – key or the selection key pad to change the target time for the defrost cycle.
6hrs - This is the amount of time between defrosts. Use the + or - key to toggle between 6 hours and 8 hours.

Note: Pressing F2 on the keypad will initiate a manual defrost for the cabinet currently being displayed.

SPEECH SYNTHESIS - N Use the + or – key to change between N (no) and Y (yes). When Y is chosen a Voice Synthesizer can be connected to the DEX/UCS port. The Voice Synthesizer will echo the display while in the service mode.

Note: When Speech Synthesis is enabled, the DEX/UCS port can no longer be used for any other communications.

Set Golden Eye - OFF Use + or - key to change between OFF, HOME and DROP.

In a 320, or a 120 snack and 320 combination, YOU MUST USE THE HOME MODE OF OPERATION. When Home is showing on the display, press Enter.

The Display will prompt: GOLDENEYE SEL 110 N

Press > one time, this will cause the N to start flashing.

Press + one time to change the N to Y.

Press < one time and the right hand digit of the selection number will start flashing.

Enter the number of the selection(s) you wish to monitor with Golden Eye. Each number you enter will be followed by a beep to confirm the machine accepted that number.

You may use the * key as a wildcard to enter multiple selections, pressing 1** (or 2**) will enable all selections in the machine for Golden Eye.

To remove selections, press > and + to change the Y back to N, and then press < and enter any selections you do not want Golden Eye to monitor.

The HOME mode in Golden Eye operates as follows:

When GE is set to HOME, and the customer makes their selection, the selection motor begins its cycle, and the GE sensor begins watching for a product to fall into the bin. The selection motor makes a complete revolution, returns to the home position, and pauses for 2 seconds. If no product is detected, the selection motor then runs a second complete cycle attempting to deliver the product. The motor pauses a second time, and if no product was detected during this vend, the motor runs a third complete cycle. If a product is delivered during any of the three cycles, the purchase is completed, and any change required is returned. If the product is not delivered successfully, the credit reappears on the display and allows the customer to choose an alternate item, or press the coin return to receive their money back, and if no product was delivered during any of the three cycles, an error is created.

After any selection motor runs three times without GE detecting a product, an error is posted, and that selection is disabled from vending. If three different selections are disabled with GE errors, then a GE disabled error is posted, and GE for the entire machine is disabled, and all selections operate as if GE was set to OFF. For machines set to HOME, this disabled condition remains until the machine door is opened and closed. The errors will remain until they are cleared.

diagnostic menu heading

The Diagnostic Menu heading contains all the self-diagnostic capabilities of the machine.

Pressing ENTER when the display indicates Diagnostics will cause the display to be updated with View Errors.

Use the < or > arrow keys to scroll through the following menu items:

View Errors Clear Errors Test Vend Test Motors Test Baffle Door

Pressing ENTER when any of the above items are on the display will give you access to that Menu Item.

Below is a detailed list of each of the above Menu Items:

Display
VIEW ERRORS Pressing ENTER to will cause the first of any pending errors to be displayed. Use the < or > to sequence through the error list. Pressing F2 when viewing any error will cause the time and the date the error occurred to be shown on the display.

The following lists the possible error codes;

- MOTOR XYZ STALLED
- MOTOR XYZ STUCK HOME
- MOTOR XYZ DIDNT HOME
- MOTOR XYZ OFF HOME
- MOTOR XYZ MISSING
- CAB X DEFROST ERROR
- BAFFLE X CURRENT
- BAFFLE X TIMEOUT
- HEALTH SHUTDN CAB X

CLEAR ERRORS - N Use the + or – key to change between N (no) and Y (yes). Pressing ENTER, when set to Y will cause all errors to be cleared.

TEST VEND - N Use the + or – key to change between N (no) and Y (yes). Pressing ENTER, when set to Y will cause the display to prompt:
TEST VEND ACTIVE The Selection buttons will become active allowing test vends. Closing the door will automatically turn Test Vend off.

TEST MOTORS Press ENTER will prompt:
TEST MOTOR - 110 Key in any selection number to be tested. To test the entire cabinet key in 1** for cabinet 1, or 2** for cabinet 2. The test will show Motor XXX Passed /Failed for 3 seconds for every selection tested. This is a motor detection test and does not vend the motor.

TEST BAFFLE DOORS Pressing ENTER will cause the display to prompt:
OPEN DOOR - CAB1 Use the < or > arrow to move between Open Door and Cab1.
Open Door - Use the + or – to toggle between open door and close door.
Cab1 - Use the + or – to toggle between Cab1 (cabinet 1) and Cab2 (cabinet 2).
Pressing ENTER will cause the baffle door to perform the test shown on the display.

Pressing ENTER when the display indicates Security will cause the display to be updated with Machine ID.

Use the < or > arrow keys to scroll through the following menu items:

Machine ID Serial Number Password Definition Password Prompt Set Security Levels
Set Product Codes Machine Reset

Pressing ENTER when any of the above items are on the display will give you access to that Menu Item.

Below is a detailed list of each of the above Menu Items:

Display

MACHINE ID 1234567890	Press ENTER to assign a machine ID number. Use the selection keypad to enter a Machine ID number up to 10 digits long. Press ENTER to commit to any changes.
SERIAL NUMBER 0987654321	Press ENTER to assign a machine Serial number. Use the selection key pad to enter a Serial number up to 10 digits long. Press ENTER to commit to any changes.
PASSWORD DEFINITION	The four levels of security they are: SuperUser - highest security level Level 1 - SuperUser and level 1 have access Level 2 - SuperUser , level 1 and level 2 have access Level 3 - this is the lowest level of security and no password can be assigned. Press ENTER to change the factory passwords to custom passwords. The display will Prompt:
PASSWORD 2 2222	Use the < or > arrow to move between the security level and the password. The + or – key will toggle the flashing digit or use the selection keypad to change the numeric digits. Press ENTER to commit to the password for the security level shown on the display.
PASSWORD PROMPT - N	Use the + or – key to change between N (no) and Y (yes). Pressing ENTER, when set to Y will cause the password prompt to be displayed as soon as the user attempts to press ENTER. If the password prompt is set to N (no) and menu items have been assigned security levels, the user must know to press ENTER, then escape to get the password prompt to appear on the display.
SET SECURITY LEVEL - N	This menu allows you to set a Security Level for each Menu Heading and Menu Item. Note: Setting a Menu Heading to a Security Level will also hide all Menu Items under the Menu Heading. The four levels of security they are: SuperUser (S) - highest security level. Level 1 - SuperUser and level 1 have access. Level 2 - SuperUser, level 1 and level 2 have access. Level 3 - this is the lowest level of security and no password can be assigned. Use the + or – key to change between N (no) and Y (yes). Pressing ENTER, when set to Y will cause the display to prompt:
MIS 3	MIS - Is the first Menu heading. Use the < or > to scroll through the Menu Headings and Menu Items. 3 - is the current security level for the Menu Heading or Menu Item shown on the display. Use the + or – keys to change the security level. Press ENTER to commit to security level changes.
FACTORY TEST - N	Use the + or – key to change N (no) to Y (yes) & press ENTER to test all spirals in the machine. The machine will begin to vend all spirals in sequence. If a motor is not present or bad the machine will beep three times and display the bad motor. To continue with the test press ENTER.
PRODUCT CODES - MANUAL	This menu allows you to choose the format the DEX/UCS information is transferred. Use the + or – key to change between MANUAL & AUTO, press ENTER to Set. MANUAL - The DEX/UCS information is transferred by Product Code. Product Codes can be assigned to a selection or number of selections. See Price setting instructions for details on manually setting product codes. AUTO - The DEX/UCS information is transferred by selection (How many times each selection was vended).
MACHINE RESET - N	This menu allows you to reset the machine. The Four Reset options are as follows: Messages - Resets all messages back to factory defaults. Options - Resets all set up options to factory defaults. MIS Data - Resets all MIS (accountability) data, interval and historical to zero. F Keys - Resets all the function keys F1-F7 and *F1-*F7 to factory defaults. All - Resets the entire board to the factory defaults of software in the board. Use the + or – key to change between N (no) and Y (yes). Pressing ENTER, when set to Y will cause the display to prompt:
RESET - MIS	Use the + or – key to change between the five reset options. Press ENTER to commit to the reset option. The display will prompt:
ARE YOU SURE - N	Use the + or – key to change N (no) to Y (yes) & press ENTER to commit to a reset.

time functions menu heading

The Time Functions Menu Heading contains all the programmable time functions in the machine.

Pressing ENTER when the display indicates Time function will cause the display to be updated with Set Discount Times.

Use the < or > arrow keys to scroll through the following menu items:

Set Discount Times Set Discount Options Set Time / Date Set Shutdown Times Set Shutdown Options

Pressing ENTER when any of the above items are on the display will give you access to that Menu Item.

Below is a detailed list of each of the above Menu Items:

Display

SET DISCOUNT TIMES
Disc 01 00:00-00:00

Press ENTER, the display will prompt:
Disc 01 is the Discount period. You can set up to 10 different Discount periods. The < or > arrow keys will change which digit is flashing and the + or – key will toggle the flashing digit.
00.00-00.00 is the time settings for the Discount. The number on the left is the time the Discount will start. The second number is the time the machine resumes normal pricing. 00.00 is midnight and all times must to be set in Military time. The times set can not be set to cross over midnight, if you are setting a machine to be Discount all night long you will need to set two Discount periods. Example: If a machine is to be Discounted from 7PM to 7AM the two Discount periods would be set as follows: Disc 01 19:00-23:59 Disc 02 00:00-07:00

"SMTWTFS"

Pressing ENTER when viewing a Discount will change the display to:
Uppercase letters indicate that the Discount will be active that day.
The < or > arrow keys will change which digit is flashing and the + or – key will toggle the flashing digit between uppercase and lowercase. Pressing ENTER will apply the days of the week as they are currently set on the display.
Example: sMTWTFS = Monday through Friday the machine will Discount, Saturday and Sunday the machine will not Discount.

When all discount times are set:
a. Press ESC to Exit back to the Menu item Set Discount Times.
b. Press the > key one time to:

SET DISCOUNT OPTIONS
DISCOUNT ITEMS 01 0.00 N

Press ENTER. The Display will prompt:
01 is referring to Discount period 1 programmed above.
0.00 is the amount of discount for all items selected for discount period 01 (example 0.05 will reduce a 0.50 cent item to 0.45 cents.
the N (no) or Y (yes) indicated the current status of Discount period 1. Use the + or - keys to toggle between N and Y. Press "ENTER" the display will prompt:
Press the > one time to N (no)
Press < one time to 110 (selection number)
Use the selection buttons to key in the selections to be dicounted when the discount period above is activated. **Note: Wild Cards can be used when entering selections.**

01 Discount - 110 N

SET TIME/DATE
13:10 18,JAN, 00

Press Enter to set the time and date. The Display will prompt.
13:10 (1:10 PM) is the current time, all times are in military time.
18, Jan, 00 is the 18th day of January 2000.
The < or > arrow keys will change which digit is flashing and the + or – key will toggle the flashing digit or use the selection keypad to change the numeric digits. Press ENTER to commit to the time shown on the display.

SET SHUTDOWN TIMES
SHUT 01 00:00-00:00"

Press ENTER, The display will prompt:
Shut 01 is the Shutdown period. You can set up to 10 different Shutdown periods. The < or > arrow keys will change which digit is flashing and the + or - key will toggle the flashing digit.
00.00-00.00 is the time settings for the Shutdown. The number on the left is the time the Shutdown will start and the machine will be disabled. The second number is the time the machine will turn back on. 00.00 is midnight and all times must to be set in Military time. The times set can not be set to cross over midnight, if you are setting a machine to be Shutdown all night long you will need to set two Shutdown periods.
Example: If a machine is to be Shutdown from 7PM to 7AM the two Discount periods would be set as Follows: "SHUT 01 19:00-23:59 SHUT 02 00:00-07:00

SMTWTFS

Pressing ENTER when viewing a Shutdown will change the display to:
Upper case letters indicate that the Shutdown will be active that day.
The < or > arrow keys will change which digit is flashing and the + or – key will toggle the flashing digit between uppercase and lowercase. Pressing ENTER will apply the days of the week as they are currently set on the display.
Example: sMTWTFS = Monday through Friday the machine will Shutdown, Saturday and Sunday the machine will not Shutdown.

When all Shutdown times are set:
a. Press ESC to Exit back to the Menu item Set Shutdown Times.
b. Press the > key one time to:

SET SHUTDOWNOPTIONS
SHUTDOWN ITEMS 01 N

Press ENTER. The Display will prompt.
ITEMS 01 is referring to Shutdown period 1 programmed above.
The N (no) or Y (yes) indicates the current status of Shutdown period 1. Use the + or – keys to toggle between N and Y. Press ENTER, the display will prompt:
Note: If you are in a school and want to turn off the Shutdown feature for the summer and leave the times programmed, you can do this by changing the current status to N.

01 SHUTDOWN -110

Press the > one time to N (no)
Press the + or - key one time to Y (yes)
Press < one time to 110 (selection number)
Use the selection buttons to key in all selections to be shutdown for the shutdown period above.
Wild Cards can be used when entering selections.

NOTE: The Selections to be Shutdown must be selected for each Shutdown period.
If all selections are to be Shutdown, the display will prompt machine not available until the time the machine is programmed to turn back on. If only specific selections are to be Shutdown the display will prompt Selections (Selection numbers) not available until whatever time it is programmed to turn back on.

The Display Menu Heading provides access to all the Display Menu Items in the machine.

Pressing ENTER when the display indicates Display will cause the display to be updated with Set Menu Order.

Use the < or > arrow keys to scroll through the following menu items:

Set Menu Order Alt Language Set User Messages Set Out of Service Message Set After Sale Message

Pressing ENTER when any of the above items are on the display will give you access to that Menu Item.

Below is a detailed list of each of the above Menu Items:

Display

SET MENU ORDER

This menu allows you to change the order that the Menu Headings appear on the display. Press ENTER the display will prompt:

MENU] - M15

Use the < or > keys to move between the Menu number and the Menu Heading. Use the + or – key to scroll through the available menus or to change the menu number. Press ENTER to commit to changes in the menu order.

ALT LANGUAGE - N

This menu allows you to use an alternate language for all messages. Use the + or – key to toggle between Y and N.

N - indicates all messages will be shown in English.

Y - Indicates all messages will be shown in the alternate language programmed by MasterMenu Online.

Press ENTER to commit to any changes.

SET USER MESSAGE

Use this menu to program up to three different user messages. Press ENTER and the display will prompt:

POS-E EDIT

Use the < or > keys to move between the fields.

Use the + or – key to toggle between:

POS-F, POS-A, POS-B and POS-C.

POS-F stands for the factory message; this message is not changeable.

POS-A/B/C are the three messages that can be programmed.

Pressing the ENTER key when the display prompts POS-A Edit allows you to program message A. The display will prompt:

USER MESSAGE #1

Note: this is a two step process, first you need to Edit (program) a message (s) then you need to set the message to be active.

To Edit the current message:

Use the + or – keys to scroll through the Upper and Lower case letters, the numbers 0-9 and a number of special characters including a blank space. Use the <or> to move the flashing cursor to the left or right. Start your message by overwriting the current message (User Message #1).

Pressing the INS (insert) key will allow you to insert a character to the left of the flashing digit.

Pressing the Del (delete) key will delete the flashing character. When the message is complete press ENTER. There is no start or end character required. **Note: this message will be stored and must be set for the message to become active.**

To Set a Message:

POS-A SET

Use the + or – key to toggle the display to the message to be set (F, A, B or C).

Press the > one time and the T in the word edit will start flashing.

Press the + or – key one time and the word set will appear.

Press ENTER and the POS message shown will be set.

Note: if the message contains more characters than can be shown on the display the display will scroll. If the message is shorter than the display and you still want it to scroll you need to add blank spaces to the end of the message until the message starts to run off the display.

display menu heading

SET OUT OF SERVICE This menu allows you to set an out of service message. The out of service message is added on to the end of the machines out of service message.
Press ENTER and the display will go blank with a flashing cursor.
Use the + or – keys to scroll through the Upper and Lower case letters, the numbers 0-9 and a number of special characters including a blank space. Use the <or> to move the flashing cursor to the left or right
Press ENTER and the Out of Service message shown will be set.

SET AFTERSALE MESSAGE This menu allows you to set an After Sale Message. Start your message by overwriting the current message
(Thank You Very Much).
Press ENTER and the display will prompt:
THANKYOUVERY MUCH Use the + or – keys to scroll through the upper and lower case letters, the numbers 0-9 and a number of special characters including a blank space. Use the <or> to move the flashing cursor to the left or right.
Press ENTER and the After Sale Message shown will be set.

This Page Intentionally Left Blank.

Problem	Symptom	Remedy
No Power	No LED on Logic Board	Check for 120Vac Where Line Cord Plugs into Power Box. Check for 8Vac and 24Vac at J5 Connector Coming onto Logic Board.
Doesn't Accept Coin	Changer Unplugged	Plug in Changer
	Defective Changer	Replace Changer
	Defective Logic Board	Replace Logic Board
	No Power to Machine	Check for 120Vac Where Line Cord Plugs into Power Box. Check for 8Vac and 24Vac at J5 Connector Coming onto Logic Board.
Won't Payout Change, Incorrect Change Returned	Changer Unplugged	Plug in Changer
	Defective Changer	Replace Changer
	No Power to Coin Payouts	Replace Logic Board.
	Coins Jammed in Tubes	Remove Coins
Won't Take Bills	No Coins in Coin Tubes	Fill Coin Tubes
	Belts or Stacker Don't Run on Power Up.	Check for 24Vac at Validator.
	Belt Run, Bill Goes in Half Way but Won't Accept	Replace Validator.
	Incorrect Inventory	Check Inventory of Coin Tubes by Pressing F7.
Display Says Make Another Selection.	Motor Half Cycled	Open and Close 320 Cabinet Door to Home Motor. Add Cover to Motor, Frozen Switch.
	Motor Not Turned on in Configuration	Turn on Motor in Configure Motors Menu Item Then Open and Close 320 Cabinet Door and Machine Will Scan and Turn on That Selection.
	Motor Won't Turn	Press F6 to See If Motor Works in Test Vend, If it Does Check Motor Configuration, If Not Change Motor.
Display Says Invalid Choice	Motor Is Paired incorrectly with Selection That Can't Be Found.	Unpair Selection and Test.
	Motor Not in Configuration	Turn on Motor in Configure Motors Menu Item.
Multiple Motors Running Together.	Motors next to Each Other.	Unpair Motors.
	Motors Not next to Each Other.	Replace Food Driver Board or Shorted Cabinet Back Harness.

trouble shooting chart

Problem	Symptom	Remedy
Health Control Shutdown	Evaporator Frozen.	See Evaporator Frozen below.
	Refrigeration Problem	See below.
Compressor Not Running, Refrigeration LED off.	Logic Board Set to Ambient.	Set Logic Board to Food or Frozen
	Check Temp and Reading Shows Cabinet Is Cold but Cabinet Is Warm.	Replace Temp Sensor.
	Status Light Not Flashing on And/or Refrigeration Light Not on FDB	Communications Cable Not Connected Between FDB and LCB. Communications cable must be connected to board before MDB peripherals.
	Status Light Flashing, Refrigeration Light Not On.	Logic Board Set to Ambient. Cabinet Jumper Not Set Correctly on FDB.
Compressor Not Running, Refrigeration LED on.	Status Light Flashing, Refrigeration Light On.	No 117vac to Cabinet, Check Wall Outlet and Line Cord.
	FDB Not Sending 24 Vdc to Compressor Relay.	Check for 24Vdc on FDB at P4 pins 1 and 2, if none replace FDB.
	Power to Compressor but Compressor Doesn't Start.	Check Overload and for Tight Connections, Check Start Components, Check Windings on Compressor.
	Refrigeration LED on, on FDB but Compressor And/or Fans Not Running.	Check for 120 Volts Coming out of Relay Box to Compressor Harness. If No Voltage Check Relay in Relay Box and Harness from FDB to Relay Box. No 120Vac at Relay Contacts of Refrigeration Relay or Coming into Machine.
Compressor Runs Hot, Trips Overload.	Condenser Plugged	Clean Condenser
	Intake Screen Plugged	Clean Air Intake Screen
	Screws Not Tight on Overload.	Tighten Screws on Overload.
	Machine Pushed up Against the Wall.	Ensure Air Deflector Installed.
	Low Line Voltage.	Machine Requires a Minimum of 105Vac to Run Properly

Problem	Symptom	Remedy
Evaporator Frozen.	Air Leak	Baffle Door Sticking Open, Binding. Adjust Baffle Door.
	Defrost Heater Not Working	Check Power Supply to Heater at 6 Pin Connector Coming out of the Relay Box, Pins 3 to 5 Should Be 120vac When Machine is in Manual Defrost. Check Resistance on Heater, Should Be 23 Ohms \pm 3
	Bi-metal Not Working	Bi-metal Should Have Continuity When Not in Defrost Between Pins 1 and 2 at the 6 Pin Connector Coming out of the Relay Box.
	Evaporator Fan Not Running	Replace Evaporator Fan, Check for 117 Vac at 6 Pin Connector Coming out of the Relay Box between pins 3 and 4
Machine Cools but Will Not Pull down to Desired Temp, or Compressor Doesn't Turn off.	Condenser Plugged	Clean Condenser
	Intake Screen Plugged	Clean Air Intake Screen
	Machine Pushed up Against the Wall	Machine must Have 6" Behind for Proper Air Circulation. An Air Deflector Is Sent with Every Machine, this Air Deflector Will Not Allow the Machine to Be Pushed up Against the Wall
	Low Charge	Replace Refrigeration Unit.
No Lights	Health Code Shutdown	See previous page.
	Bad or Broken Interlock Switch	Fix or Replace.
	No Power to Lights	Bad Relay or Wire off Light Relay
One Light Not Working	Bulb Burnt out	Replace Bulb
	Defective Ballast	Replace Ballast Loose Harness
	Defective Starter	Replace Starter
Baffle Door Does Not Open	Defective or loose baffle Door Motor Harness	Replace or fix harness
	Broken Roll Pin	Replace Roll Pin (.094 X 1")
	Defective Motor	Replace Motor
	Defective Food Driver Board	Replace Food Driver Board

Control Board Installation Instructions

(For Lcb part's 360251 & 360274)

CAUTION

THE FOLLOWING PROCEDURE REQUIRES THAT PROPER ANTI STATIC PRECAUTIONS ARE TAKEN OR DAMAGE TO THE BOARD MAY RESULT.

When installing this board into any machine it is necessary that the board be reset to factory defaults.

Instructions to reset the board are as follows:

Install the board into the machine and reconnect all the harnesses and power up the machine.

1. Open Machine/Tower door.
The display should say Enter for MasterMenu.
2. Press Enter.
3. Press the > until the display indicates Security.
4. Press Enter
5. The display will indicate Machine ID, press the < one time and the display will indicate Machine Reset - N.
6. Press the + key the display will indicate Machine Reset machine - Y.
7. Press the Enter key, The display will indicate Reset - Messages.
8. Press the + key until the display indicates Reset - All.
9. Press Enter, the key and the display will indicate Are you Sure - N.
10. Press the + key and the display will indicate Are you Sure - Y.
11. Press the Enter key and board will beep and the display will default to Machine Reset - N.
The Board has now been set to factory default.
12. See quick set up reference page in the Service Manual for Instructions on programing the Control Board.

DIRECTIONS FOR INSTALLING SOFTWARE UPGRADE IN APi120

- 1) Turn off power to the Control Module and the Food Cabinet. Wait 5 minutes for the large capacitor to discharge before working on the board. Identify and separate the three chips before beginning any work. The two chips for the Control Module are identified as LCB VX.XX and the Food Cabinet are identified as FDB VX.XX.
- 2) Remove all connectors and covers from both control board.
- 3) Observing proper anti-static procedures (grounded wrist strap) remove the only socketed chip (U1) on the Food Driver Board (FDB) and carefully install the new chip. Refer to the drawing below for correct orientation of the chip. **ALL CHIPS REPLACED MUST BE INSTALLED CORRECTLY OR THEY WILL BE DAMAGED.** Each chip being replaced has one corner notched to identify its correct orientation, and the socket had a corresponding notch and an arrow.
- 4) Remove the battery from the LogiCenter Board (LCB), and observing proper anti-static procedures (grounded wrist strap) remove the two socketed chips, and replace. Refer to the drawing at right for the correct orientation of each chip.
- 5) Replace both board covers, and reinstall all harnesses. Before restoring power to machines, make sure that the Service Connector and Power Connector are plugged to the board correctly. Close food cabinet door.
