Parts	

To achieve the most trouble-free operation from your Studio Series Merchandiser, it is recommended that this service manual be thoroughly read and the instructions followed pertaining to installation, servicing and maintaining of the unit.

Should you have questions pertaining to this manual or the vendor, please contact your APi distributor or write directly to:

Technical Service Dept. Automatic Products int. ltd. 75 West Plato Blvd. St. Paul, MN. 55107 USA 651-224-4391 651-602-3558 (fax) © **2001 Automatic Products international, ltd** DECERTERED DE LA CONTRE DE LA CO

The Studio features the simple operation and built in flexibility of this system as well as extensive diagnostics and error reporting facilities are built in to provide ease of maintenance.

HOW TO USE THIS MANUAL

This manual is divided into four basic parts:

- 1. Unpacking and installation.
- 2. Optional Equipment & Refrigeration
- 3. Components and Refrigeration.
- 4. Operating System.
- 5. Programming.
- 6. Parts
- 7. Troubleshooting.

WATCH THROUGHOUT THE MANUAL FOR THIS SPECIAL DIAMOND MARK. THIS INDICATES A POINT OF SPECIAL INFORMATION OR A HINT THAT WILL ASSIST YOU IN SETTING UP, OPERATING OR TROUBLESHOOTING THE MACHINE.

CAUTION: Certain procedures in both the operating section and the service section require that voltage be on in the machine. Only trained personnel should perform this function. Exercise extreme caution while performing these procedures. These procedures will be marked with the lightening bolt symbol as it appears at left.

CAUTION: Certain procedures in both the operating section and the service section requires a qualified trained technician to perform the particular task at hand. These procedures will be marked with the exclamation symbol as it appears at left.

First Digits indicate model, example shown is a SL3C (Studio Line 3 with chiller) Glassfront Merchandiser - The machine identification may contain up to six characters dependent upon the model.											

Suffixes

C - indicates a chilled machine

E - indicates a machine built specifically for export outside North America

FEATURES OF THE STUDIO MERCHANDISER

- Up to 80 selections.
- Multi drop buss capabilities.
- Extensive diagnostics capabilities.
- Friendly text based interface.
- Flexible spiral spacing for large products.
- Eight point star drive motor.
- Dex/Ucs compattible.

PRICING

- Global pricing by machine or by shelf.
- Extensive accountability, including all discounts and free vends.

OPTIONS

- Point of sale window.
- Delivery bin cushion.
- Base kit.
- Lexan window.

NOISE LEVEL

Operates at less than 70 db (A).

ACCEPTABLE AMBIENT OPERATING TEMPERATURE RANGE

All equipment manufactured by Automatic Products intl. Ltd. is designed to work properly in a temperature range of 10°C to 38°C (50°F to 100°F) in still air (75% R.H. noncondensing). The machine is being stored in a temperature range of -18°C to 68°C (0°F to 155°F).

installation _

The Studio Line is assembled and packed so that a minimum amount of time is necessary for preparation to install it on location. The following steps are recommended to insure correct unpacking.

- 1. **Shipping Damage:** Thoroughly inspect the exterior of the carton for damage which may have occurred during shipment. Report any damage to delivering carrier and follow their instructions.
- 2. Remove the remainder of the packing material. On machines shipped with lock in place, the keys are taped inside the coin return.

NOTE: Because the weight concentration is toward the back of the cabinet, trucking and lifting should be done from the back. CAUTION should be taken when trucking from side.

- 3. On machines with lock in place, unlock, and turn handle to open door. When no lock is furnished, remove clip and turn handle. Swing door to its full open position.
- 4. Remove all packing tape and paper from various areas of machine and the shipping strap.
- 5. **Warranty:** The warranty card is attached to the cover of this manual. It must be filled out in full and mailed at once to insure coverage.

◆ IMPORTANT: A set of anchoring brackets are sent with each machine. The kit is located in the bottom of the machine complete with instructions. It is recommended that this kit be installed to prevent shifting of the machine.

CLEANING

The Studio Line series will do the best merchandising job for you if it is kept clean. The display window can be cleaned with any good glass cleaner. The exterior and interior surfaces should be cleaned with warm water and mild detergent. Rinse thoroughly and dry all surfaces.

CAUTION: Do not use any cleaners containing silicon as this could cause electrical failures.

The main product shelves can be best cleaned with the spirals and product spacers removed. Refer to page 1.03 for removal of spirals and removal of the product spacers.

Clean the acceptor on the coin mechanism frequently as accumulated dirt in this area can cause coins to hang or not be accepted. Follow recommended cleaning procedures as described by the manufacturer.

Leveling the Machine: on location is important for the proper function of the machine. The four leveling screws in the legs are the means of leveling the machine. After positioning the machine, level machine in front to rear and right to left directions. After leveling, turn front right (lock side) leveling screw in about one-half turn to drop this corner slightly to make the door easier to close and lock.

Voltage and Polarity Check

It is important that this machine is hooked up to the proper voltage and polarity for your country. Use a voltmeter to verify voltage and polarity.

CAUTION: THIS MACHINE IS DESIGNED FOR INDOOR USAGE ONLY. ANY OTHER USAGE MAY VOID THE MANUFACTURERS WARRANTY.

CAUTION: THE FOLLOWING PROCEDURE REQUIRES THAT THE MACHINE HAVE POWER APPLIED AND A SHOCK HAZARD EXISTS.

CAUTION: IT IS IMPORTANT THAT THIS MACHINE IS HOOKED UP TO THE PROPER VOLTAGE AND POLARITY FOR YOUR COUNTRY. USE A VOLTMETER TO VERIFY VOLTAGE AND POLARITY. SHOULD THE READING BE ANY DIFFERENT THAN A NORMAL READING FOR YOUR COUNTRY OR IF YOU ARE UNSURE OF WHAT THE READING SHOULD BE CONTACT AN ELECTRICIAN.

CAUTION: DIFFERENT COUNTRIES MAY HAVE UNIQUE PLUG ARRANGEMENTS. ENSURE THAT THE MACHINE IS PROPERLY GROUNDED BEFORE OPERATING.

CAUTION: THE POWER CORD IN THIS MACHINE IS OF A TYPE Y ATTACHMENT. IF THE POWER CORD IS DAMAGED, IT MUST BE REPLACED BY: THE MANUFACTURER, IT'S SERVICE AGENT, OR A SIMILARLY QUALIFIED PERSON, IN ORDER TO AVOID A HAZARD.

Loading Snack Shelves

Open door to full open position, push down on plastic lock lever (Figure 1) on the right side of shelf to unlock shelf, holding lever down. Grasp the shelf, under both front corners (see Figure 1), lift front shelf slightly and pull forward until shelf reaches its stop. The shelves tilt down (do not drop) to make loading easier. Only one product shelf should be in the loading position at a time. When returning a shelf, be sure the shelf is in its full home or vend position. Begin loading with the top shelf. Move it to the loading position. The height spacing for items is greatest in this shelf and the tallest bagged items should be placed there. Soft items, such as pastry, pies, etc., should be placed in the lowest snack shelf, making the drop distance as short as possible.

◆ **IMPORTANT:** Product must not be forced into the spiral spaces but should fit freely. If the product is too tight, use a larger pitch spiral. The bottom of the product should be placed on top of the spiral wire that rests on the shelf surface (see Figure 2). The width of the product must be greater than the diameter of the snack spiral. If it is smaller, the product may fall through when it is in the front, ready to vend position.

Figure 1: Moving shelf to loading position.

Figure 2: Placement of product on main product snack shelves and front end position of spiral.

installation ____

Adjusting the Stopping Position of the Spiral.

One primary difference that distinguishes the new motors from previous motors is the presence of an eight sided star at the drive hub of the motor. This permits the stopping position of the spiral to be customized by the operator to ensure the best possible delivery of product. To change the stopping position of the spiral, remove the spiral lock from the motor by pinching the shaft of the spiral lock from the back side of the motor and pulling forward on the front side of the spiral lock. The spiral lock can be reinstalled in any of eight different positions by turning the spiral lock to the position desired and pushing the shaft of the spiral lock through the eight sided star at the drive hub of the motor.

Removal of Spiral

Grasp the front of the spiral and turn it clockwise. Lift the spiral up and off of the spiral lock. When replacing a spiral attach it around the tab on the spiral lock and turn the spiral counterclockwise to lock it in place. Be sure the front end of the spiral is positioned properly (with the front end if the spiral pointing downward on the left side) (see figure 3). Give a light pull on the front of the spiral to see that it is locked in place.

Figure 3: Removing and installing spiral.

Product Spacers-5 Selection Shelf Shelf

A product spacer is used to reduce the width of the product area and should be used on any 5-selection snack shelf where the product width is 4" or less. Spacers should fit within 1/8" of the product but should not fit tight against the product. There are four positions in each snack space where these spacers can be placed. To install the spacer, align the lock ears (on the lower edge of the spacer) with one of the three sets of slot (one front and one rear). (See Figure 4). Push the spacer to the rear to allow the ears to enter the slots, then allow the spacer to move forward. Be sure the ears are in the same set of slots, front and rear. (See Figure 4). Continue loading all spirals adjust with spacers where needed in the top shelf. Return the top shelf to the vend position and following this procedure load the remainder of the large spiral shelves. The shelf divider separating the right (lock side) column from the next column is movable to allow vending of products wider than 5 " in the second column. If this is used the right column must be used to vend a narrower product.

Figure 4: Alignment of movable product spacers.

Loading Main Product Candy Shelves

The 10-selection (candy type) shelves are loaded similar to the 5-selection shelves except that the bottom of the product sits on the shelf in front of the spiral wire (see Figure 1.5) that rests on the shelf. These products must also fit properly product in the spiral space; do not force product into spiral. These spirals are removed and installed the same as the large spiral (see Figure 3), except that the front end position is different (approximately 5 o'clock)(see Figure 5) and the front left side of the spiral must be behind the small tab located on the left side of the product space side wall (see Figure 1.5, Detail A).

Figure 5: Placement of product on candy shelves and front end position of spiral.

Product Spacers-10 Selection Shelf

The 10-selection shelves are equipped with a product spacer (see Figure 1.6) that can be pivoted from the right side of every other product space. These spacers should be pivoted out to hold the product upright, but not tight against the product. Leave about 1/8" clearance between the spacer and the product.

Figure 6: Candy shelf product spacer positioned to hold candy upright.

installation

Product Pushers

Included with the machine are enough pushers for you to install a pusher on each candy spiral. This plastic part is designed to push the top of the product forward while it is vending, helping it fall from the shelf. It can also be used with products that have the wrapper end flap on the outside of the package. In this case, the pusher prevents these products from hanging on the spiral by spreading the flap. The pusher is installed approximately 210 degrees from the front end of the spiral with the tab extending forward (see Figure 7). Locate the pusher in its proper position, hold it against the spiral wire and push the semi-circular part around the spiral wire. Note: Not every selection spiral will need a product pusher. (Example - Box Items.)

Figure 7: Location of product pusher on spiral.

Bagged or Boxed Items: In the 10-selection shelves if not loaded properly could be a problem. The sealed edge of the bag may get under the spiral wire causing the product to hang up after it has been vended. It is recommended that the lower edge of these types of product be folded forward and up (see Figure 8) next to the product before inserting into the spiral space. It is also recommended to use an 18 count spiral for bagged items because of the product setting to the bottom of the package.

Figure 8: Fold bagged items bottom edge forward and up.

CIGARETTE VENDING FROM THE STUDIO SERIES.

Cigarettes can be vended from the candy shelves using a (15 capacity) spiral for the soft pack regular, king, 100 MM or 120 MM packs. A (12 capacity) spiral should be used for (box) packs.

LOCK PRODUCT SHELVES. After all the product has been loaded be sure all shelves are returned to there vend position behind the front roller guide.

INSTALL PRICE TABS into price tab holder for each selection. (See Figure 9)

Figure 9: Installing price tabs.

Loading Gum and Mints:

The Gum and Mint shelf is located below the lowest Snack Shelve (optional). Unlatch the shelf by pulling forward the two metal latches located to the right and left of the shelf and pull forward. The cover can be pushed back to the rear for easy loading. The shelf contains four individual selections.

The first selection on the left contains two fillers for use with thin mints. (Rolaids - Certs, etc.). These fillers can be removed for standard gum or mints.

The two selections on the right of the Gum and Mint shelf also have fillers. These selections can be used for standard size gum and mints or the fillers may be removed for larger gum and mint products.

Each selection has a display hinge assembly that should be adjusted after the shelf is loaded. To adjust the display hinge, loosen the wing nut and slide the spring hinge of the flipper over the second product and fasten tightly.

• Be sure to close the cover on the gum and mint shelf before pushing the shelf back to its home position.

◆ The gum and mint shelf can be used as a loading platform while filling the machine. The maxium load of the gum and mint shelf is 35 pounds.

optional equipment .

Ventilating Fan: (Part #7501202-4 =120 Volts) (Part #750102-5 = 240 Volts) Export

The ventilating fan keeps a steady flow of air moving through the vendor cabinet. Installation of the fan takes only a few minutes. All vendors are wired with a fan plug on the junction box for easy installation.

Base Kits:

Base kits are available to make the vendor compatible with other manufacturers.

Gum and Mint:

Gum and Mint units are available as an option with Studio series vendors. For information pertaining to loading or servicing gum and mint unit, refer to this service manual for loading instructions and service instructions.

Dual Spiral Shelf:

Snack shelves can be set up to have dual spirals per selection on the shelf. The dual spirals will help vend specialty items better.

Half Cycle Motors

The half cycle motors are used to vend thin items. This motor is used with a product divider that is positioned down the center of the coil. The product is placed on both the left and right hand side of the coil. When the motor turns, it turns only 180 degrees (half revolution) rather than 360 degrees (full revolution).

Special Spirals (Studio 2,3,& 4 ONLY):

Special candy spirals are available for use in the four (4) and five (5) selection snack shelves. For the sake of identification, the back end of these spirals are colored RED and should never be used in the eight (10) selection candy shelves.

These spirals allow vending products that are too wide for the standard candy columns but may be too thin for the regular snack spirals. A product pusher and spacer should be used where required. Part numbers for these special spirals are as follows:

400139-1	12 count special spiral
400140-1	15 count special spiral
400141-1	18 count special spiral
400142-1	24 count special spiral
400143-1	30 count special spiral
400151-1	20 count special spiral

NOTE: The difference between the standard candy spiral and the special candy spiral used in the wide snack columns is in the overall length of the spiral. The special spiral is shorter than the standard candy spirals.

CAUTION: Do not attempt to use the special candy spirals in an ten selection shelf.

Soup Dispenser Studio 2,3,4: (Kit 750083)

A canned soup dispenser is available as an option for use in the four/five selection snack shelves. The dispenser is easy to install and holds up to nine cans in the unit.

Delivery Bin Cushion

A delivery bin cushion is available for use when vending heavy items.

Lexan Window

A Lexan window is available as a direct replacement for tempered glass.

Golden Eye™

The optional Golden Eye[™] Bin Sensor ensures a positive vend every time. The sensor is installed in the delivery bin and senses that a product has been delivered. If no product was delivered, the spiral will turn make up to, two more attempts. If the product is not delivered after three attempts, the make another selection led will flash and the machine will allow the customer to make another selection or press the coin return and receive their change back.

Studio 1,2,3 Chiller

The Chiller Unit

The Chiller Unit is comprised of a 1/3 horsepower compressor and is a hermetically sealed system. (no service ports). The compressor assembly is easily removed by taking out two screws and pulling the unit forward out the front of the cabinet. There is a wedge shaped insulator above the evaporator that mates with a matching wedge in the cabinet to ensure a tight seal. The refrigerant used in the refrigeration system is 134a and the charge is 9 ounces. The refrigeration system is controlled by the Refrigeration Driver Board. The Studio series glass front merchandisers are designed to operate at ambient temperature of 55°F to 100°F (13°C to 38°C). Chilled machines use a special insulated cabinet and a thermal pane window. **Note: The chiller can NOT be added at a later date.**

Studio 4 & 5 Chiller

The Chiller Unit

There are two different refrigeration units used in the Studio 4 & 5 merchandisers. The first refrigeration unit is used in machines where only the can compartment is cooled. This is referred to as an ambient machine. The other refrigeration unit is used in a machine that both the can and the snack compartment are chilled, this machine is referred to as a chilled machine. The chilled machine has a separate 24 Vdc blower that circulates chilled air into the snack area of the machine. The blower speed can be changed on the Refrigeration Driver Board to regulate the temperature of the snack area. The Studio 4 & 5 machines are designed to operate at ambient temperature of 55°F to 100°F (13°C to 38°C). Note: The Chiller Option can NOT be installed at a later date.

Ambient Studio 4 & 5 Refrigeration

This refrigeration unit is comprised of a 1/4 horsepower compressor and is a hermetically sealed system (no service ports). The refrigerant used in the refrigeration system is R134a and the charge is 9.5 ounces.

Chilled Studio 4 & 5 Refrigeration

This Refrigeration unit is comprised of a 1/3 horsepower compressor and is a hermetically sealed system (no service ports). The refrigerant used in the refrigeration system is R134a and the charge is 10.3 ounces.

Refrigeration Processing:

The Refrigeration Driver Board maintains the temperature as measured by the solid state temperature sensor. The chiller unit will be turned on at the set temperature plus 2°F and will be turned off at the set temperature minus 2°F. A minimum of 1 minute is required for both the cycle on and cycle off time of the relay. This insures the compressor is not cycled on and/or off to rapidly. Independent of the temperature, the relay, therefore the compressor, will be off 7 minutes every hour for a defrost cycle. The power for the Evaporator fan motor is constant and is not switched by the relay.

The temperature probe in the Studio 1,2,3 is mounted in cabinet below the bottom shelf on the right hand side, just above the intake air of the evaporator. In the Studio 4 & 5 the temperature probe is located in the can compartment directly behind selection 55.

Studio Refrigeration (All)

Refrigeration Driver Board (RDB)

The Refrigeration Driver Board is located in the power supply box. The Refrigeration Driver Board contains a digital display and two programming buttons. There is a window toward the bottom of the power supply box that allows you to view the current temperature in the chilled compartment. Located below the display window are the two programming buttons. Power to operate the is supplied via the MDB connector on the logic board using communications cable. Power to operate the refrigeration unit is supplied to the Refrigeration Driver Board immediately after the EMI filter and is switched on and off by a relay on the Refrigeration Driver Board. For a complete pin out of the Refrigeration Driver Board see the troubleshooting section of this manual.

Settable Temperature Range:

The settable temperature range is from $35^{\circ}F$ to $70^{\circ}F$ (1°C to $20^{\circ}C$). The recommended temperature for the Studio 4 & 5 machine is 42°F (6°C). The recommended temperature for the Studio 1,2 & 3 machine is 65°F (18°C). The Refrigeration Driver Board will maintain the temperature as measured by the temperature probe (P/N 13600001-01). The harness for the probe is plugged onto the Refrigeration Driver Board at the connector marked JP3. An unplugged or open temperature sensor probe will display as -9°F (-9°C). A shorted probe will display as 99°F (37°C).

Setting the target temperature:

1. Pressing both buttons on the RDB at the same time will toggle the display between **°F** (Fahrenheit), **°C** (Celsius) and **FA** (Fan Adjustment). Releasing the buttons when the display prompts **°F** or **°C** or respectively allows the target temperature to be set and displayed in Fahrenheit or Celsius. Releasing the buttons when the display says **FA** (see Below) allows the Fan speed to be set for the Snack area only in the Studio 4 & 5 machines. **NOTE: When in the programming mode there will be a black square (decimal point) in the bottom left corner of the display, during standby the current temperature is displayed.**

2. Pressing the left Programming button will increase the set temperature shown on the display.

3. Pressing the right Programming button will decrease the set temperature shown on the display.

4. When you reach the desired temperature, releasing the programming button for 2 seconds will lock it in and the programming decimal point will disappear and the set temperature will be locked.

Setting the Fan Speed on a Digital Temperature Control: Studio 4 & 5 with a Chilled Snack Area Only)

Pressing both programming buttons at the same time will toggle the display between °F (Fahrenheit), °C (Celsius) and FA (Fan Adjustment). Releasing both buttons when FA is displayed will show the current fan speed.

1. Pressing the left Programming button will increase the set fan speed shown on the display.

2. Pressing the right Programming button will decrease the set fan speed shown on the display.

3. When you reach the desired fan speed (settable from .1 - .10, .5 is the default) releasing the programming button for 2 seconds will lock in the new fan speed.

components.

Power Supply

The 120 VAC power cord from the wall outlet comes into the machine and plugs into the back of the main junction box located on right side of the cabinet. The voltage outputs from the junction box to the board are 24 volts and 8 volts and plugs into the (P3 position) of the Logic Board.

Lighting System

There is only one fluorescent lamp in the Studio series. The lamp is located on the top of the door and lights up the main product area. The starter is located on the hinge side of the lamp. The ballast and line filter is located on the top front left shelf support.

Main Product Shelves:

There are five or six main product shelves per machine. Each selection has its own motor mounted to the back of the shelf. Every shelf has its own harness and plug for connecting to the remainder of the circuit through the cabinet receptacle, located in the rear right of the cabinet. The motors are the same on either shelf. It is possible in to exchange a five selection shelf with a ten selection shelf or visa versa. You also have the capability to gain one inch either up or down on any shelf. To do this the shelf should be removed and the cabinet back harness receptacle lowered or raised along with the right & left shelf tracks.

Note: When exchanging the shelves, you will not need any parts but you will have to reprogram the machines prices.

Removal of Product Shelf:

- A. Lift up and push the lock levers toward the back of cabinet.
- B. Pull the shelf to its loading position.
- C. Grasp shelf in front and rear center. Lift front of shelf up above horizontal and pull shelf forward while lifting.
- D. To install shelf, reverse above procedure.

Delivery Bin:

This is located below the display window on the door and is mechanically operated. Should the door become difficult to operate, place a small amount of grease on the arm tracks.

Removal of Delivery Bin:

Remove the screws from the left and right side of the delivery bin. These screws fasten into the lower door brace. Remove the two screws and brackets at the top of the delivery bin.

Grasp delivery bin on both sides and lift up and pull back. Should the bin be tight, rock it by lifting on one end, then the other.

Replacement of Delivery Bin:

Locate lip on front edge of delivery bin over lower edge of opening in door and behind trim. Press down along lip to make sure it is fully engaged between door and trim. Install the four screws and two brackets, to secure bin to door.

Removal of Gum And Mint Motor:

Disconnect the two wires going to the motor and remove the four screws holding it to the shelf. The components attached to the front base can also be replaced. These consist of the gum and mint shelf front (Price tabs and selection), gum and mint shelf front base, gum and mint display front stop (plastic) and the gum and mint ejector.

Note: Before replacing the gum and mint motor it is helpful to tap the motor first with the screws. Assemble the four components together and mount them to the motor making sure that the head crank of the motor is inserted into the ejector. Replace the four screws and test vend that selection for proper operation.

Removal of Gum and Mint Shelf:

Under the gum and mint shelf remove the two screws holding the gum and mint receptacle harness bracket. Loosen the other two screws on each end of the gum and mint pusher stop strap and disengage it from the cabinet. Grasp the shelf and pull the shelf straight out. With the shelf out you can replace the gum and mint pusher by removing the screw.

Reverse the procedure to replace the shelf. Pay special attention when you put the gum and mint pusher stop strap back on that all the gum and mint pushers have spring tension and are behind the strap.

Vend Motors

The vend motors used in the Studio Series machines have been specifically developed to operate with the APi Control System. One primary difference that distinguishes the new motors from previous motors is the presence of an eight sided star at the drive hub of the motor. This permits the stopping position of the spiral to be customized by the operator to ensure the best possible delivery of product. Motors are of the fast trac style, with all electronics required to correctly operate the motor contained inside the gear case or the motor housing and no external control board. Each of the motors used with the Studio Control System will have two terminals. The two terminals continue to be used to identify the shelf and column (selection) to be vended.

Each motor requires two wires to operate correctly. These wires are: shelf common, and selection.

Each selection on a shelf has the same common shelf wire - all shelf harness use the wire #12 as a shelf common. This corresponds to the selected shelf wire in the cabinet harness. The terminal for the shelf common in the harness is the smallest of the two.

Selection numbers are assigned from left to right, starting with selection 0. Each selections number corresponds to the number of the wire for that selection. Selection numbers in the Studio Series Machines support a two digit selection system. The first digit indicates the shelf number and the second digit the selection wire shown above that is attached to the motor.

components.

Logic Board & Display

The control board contains all of the decision-making control and the display. All peripherals plug into the controller. The display on the controller has indicates; Credit, Price of the Product, Diagnostic Information and Options (In Service Mode). The display is socketed so that it can be replaced in the field. In addition, there are (2) LED's that indicate Make Another Selection and Check Selection Price.

Keypad

The Selection keypad (pictured below) is located on the front of swing out panel directly below the selection keypad. The Selection Keypad is used as an input source for settable data when in Service Mode. The keypad is only active for service functions when the door is open, so even in the event of vandalism to the control bezel; no access to the control functions is permitted.

Coin Mechs, Validators and Card Readers:

The Studio Series Machines support MDB protocol only.

	MDB Coin Mechanism	MDB Bill Validator
Mars	TRC-6510 TRC-6512 VN-4510	VN2502-U5M VN2512-U5M
CoinCo	9302-GX, USQ-G701 USQ-G703 USQ-L701	BA32SA BA32R
Conlux	USLZ-004-01F CCM 5 G	USLZ-004-01F

The Studio Series will automatically determine at power up which peripherals are connected and configure itself accordingly.

Power Up State

Following a power-up or reset condition, the display will show "----" until a credit device is identified. If the controller fails to identify a credit device in 10 seconds the display is blanked.

INSERT MONEY AND RECEIVE CHANGE BELOW

FLASHING CREDIT CHECK PRICE

Operate Mode

Upon closing the door the display will show the firmware revision level perform a diagnostic routine that will scan and home the motors determining what motors exist in the configuration. Upon completion of the diagnostic routine the display will show the first row of motors missing.

Standby

In Stand by, zeros will be shown along with the designated decimal point. Accumulated credit will be shown until a selection is made.

Keypad echo

When the first numeric key is pressed the display will show the selection number in the second leftmost digit. This character will remain for 5 seconds or until another key is pressed. If a second numeric key is entered, the pair will be

shown on the display for one second and then the associated price for the product will display. If the selection is disabled or shut down (using the Shutdown pin) the display will show "d". and flashes the " Make Another Selection " LED. Note, if the selection is enabled but not functioning properly (not present or not home) the " Make Another Selection " LED is flashed but the display will continue to display the selection for 5 seconds.

Credit Accumulation

Credit may be accumulated through a coin changer, bill acceptor or card reader. Card reader credit cannot be mixed with coin and/or bill credit during a single transaction or vend. Credit acceptance will be disabled when the accumulated credit equals or exceeds the highest priced item. Credit accumulation from any source is disabled or escrowed if change is not available. If the amount of card reader credit available exceeds the maximum displayable credit, the maximum credit will be displayed.

Vend process

After a keypad entry is made the logic board determines if sufficient credit is available for the selection attempted. If the credit is greater than or equal to the selection price, a vend attempt will be made for that selection. During this time, the selection will be shown on the display. If credit is less than the selection price, the price will be displayed and the Use Correct Change LED will flash for 5 seconds or until a new selection key is pressed.

Change payment

Change will be returned during the vend process as soon as it is determined that the motor has moved off of the home position. The amount of change to be returned will be displayed until all coinage is paid back. The least amount of coins available will be paid back for all credit returns.

Use Correct Change LED

If the level of the changer's least value coin tube is below the lowest sensor, the "Use Correct Change" LED will be illuminated continuously. If the machine is unable to vend the selected item because of low change, the "Use Correct Change" LED will flash 5 times.

Make Another Selection LED

If the machine is unable to vend the selected item, the " Make Another Selection " LED will be flash 5 times. Token Vends Following the acceptance of a token, the display will show "FrEE" as the accumulated credit. Further credit acceptance is disabled and a single item may be selected.

operating system ____

Token Vends

Following the acceptance of a token, the display will show "FrEE". Further credit acceptance is disabled and a single item may be selected to vend for the token credit. See the programming section of this manual for instructions on setting up and choosing which selections will work with tokens.

Accountability Information

All MIS data is stored as both resettable and non-resettable with the exception of Machine Identification Number, Machine Serial Number, Software Version Number, Number of MIS Resets, Number of Machine Resets, Door Open History, and Value of Coins in Tubes which shall be stored as non-resettable only. All vend counters will roll over at 7 digits (9,999,999). All cash counters will roll over at 8 digits including the decimal point (999,999.99).

Vend accounting (MIS) is updated as follows:

* Indicates which field is updated for a given vend type.

	Vend Type				
Field	Token	Vend	Testved	Freevend	
#VENDS	*	*		*	
\$VENDS (Sale Price)	0	*		0	
#/PROD	*	*		*	
\$/PROD (Sale Price)	0	*		0	
#/TESTVEND			*		
# /FREE				*	
\$ /FREE				*	
# /TOKEN	*				
\$ /TOKEN	*				

Table 1: MIS Field Update Chart

DEX/UCS

The Studio series supports DEX/UCS Communications Protocol - NAMA Vending Industry Data Retrieval Standard. The machine will automatically recognize the DEX/UCS device when it is plugged into the control board and will recognize when the device initiates the c ommunication protocol. The transmission/reception of data to the device will then take place automatically. See the next page of this manual for definitions of the DEX/UCS download protocol.

SHUTDOWNS

The Control Board on Studio Series Machine can be Shutdown by creating a closed circuit between pin 3 & pin 7 on the service connector (P2). This will shut down all selections in the machine. When in shutdown mode and a selection is attempted the display will prompt "d" on the far left side of the display. The Studio Control Board does not have a built in time clock so if a timed shutdown is desired you will need to provide your own timer or key switch.

Caution: Do not apply Voltage to these pins! Damage to the Board will result!

The MIS data stored by the machine for a DEX/UCS download is as follows:

DEX/UCS	Definition

Service Modes (quick reference)

See the following pages for more detailed information on the service modes listed below.

To access the Service Mode press the mode button on the board, the display will prompt Sr or scroll through a list of errors (if any). The last error will remain on the display until a Service mode is entered. To access the service modes, enter one of the mode numbers below.

MODE NUMBER	
01	Price Assignment
02	Test Vend
03	Multiple Vend Setup
04	Bill Escrow Setup
05	Force Vend Setup
06	Free Vend Setup
07	Free Vend Coupon Setup
08	Historical Total Value of Sales
09	Historical Total # of Vends
10	Historical Value of Can Sales
11	Historical # of Can Vends
12	Historical Value of Sales By Selection
13	Historical # of Vends By Selection
14	Set Payback type

1923456780	Starts a factory test.
20	Golden Eye set up.
21	Number of missed golden eye vends

Service Mode Numbers

01 - Price Assignment

The display will prompt Prc.

Enter the price to be set using the numeric keypad.

Press # and the display will prompt "**S**" for Selection. Enter all the selection numbers to be set at the price entered in the previous step.

Press # to enter another price or C to lock in and go back to the service mode.

02 - Test Vend

The display will prompt SL. Enter the selection numbers to be tested. Press C or close door to exit.

03 - Multiple Vend Setup

The display will prompt **nul n**. Use *to toggle between* **n** (no) & **Y** (yes). Press C or close door to exit.

04 - Bill Escrow Setup

The display will prompt **ESc n**. Use # to toggle between n (no), F (first bill) or L (last bill). Press C or close door to exit.

05 - Force Vend Setup

The display will prompt Fu n.

Use *to toggle between* **n** (no) & **Y** (yes). Press C or close door to exit.

06 - Free Vend Setup

The display will prompt Fr n.

Use *to toggle between* **n** (no) & **Y** (yes).

Press C or close door to exit

07 - Free Vend Coupon Setup

The display will prompt FC

The display will show in sequence the shelves set to work with a coupon.

To add selections, press the selection numbers to be added. To remove a shelf, press the *mathefull* key while the shelf number is being displayed.

Press C or close door to exit

08 – 11 Accountability

The first four digits are displayed for two seconds followed by the second four digits.

Press C to exit. 08 - Historical Total Value of Sales.

- 09 Historical Total # of Vends.
- 10 Historical Value of Can Sales.
- 11 Historical # of Can Vends.

12 - Historical Value of Sales by Selection.

The display will prompt HuSS.

Enter a selection number and the display will show the value of vends for each selection number pressed. Press C or close door to exit.

13 - Historical Number of Vends by Selection

Display will prompt HnSS.

Enter a selection number and the display will show the value of vends for each selection number pressed.

14 - Set Payback Type

Use the {#} key to toggle the "Change Payback" option between "CHL" (Least Coin Change Payback) and "CH3" (MDB Level 3 Change Payback)

15300 - Allows Setting a Serial Number.

The display will go blank. Enter in up to a 20 digit numeric serial # Press c or close door to exit.

17200 - Allows Setting a Machine ID.

The display will go blank. Enter in up to a 20 digit numeric serial # Press c or close door to exit.

18400 - Allows Setting a Location ID

The display will go blank. Enter in up to a 20 digit numeric serial # Press c or close door to exit.

1923456780 - Starts a Factory Test.

The test will stop and the display will prompt each motor that fails or is not present.

Press the # button to continue the test after each invalid motor.

Service Mode Quick Reference Continued

The display prompts the selections enabled for Golden Eye. Press **<or>** keys to scroll through the selection set to work with Golden Eye. To add selections press the number of the selection to be added. To remove an entry press the *#* key while the selection number is being displayed. The default is all selections turned on.

Service Mode (detailed)

21 - Number of missed golden eye vends

The display shows the # of Missed Golden Eye Vends. The seven digits are broken into two, displays. First are the lower four digits followed by the upper three digits.

The Service Modes allow you to update all the prices and options in the machine. Upon opening the machine door and depressing the Service button located on the top left corner of the board, the controller enters the Service mode. If a period of no activity occurs for 5 minutes, the controller will automatically revert to the Operate mode. Entrance to the Service mode clears any current credit. In addition, entering the Service mode, will display diagnostic information until an additional Service mode function has been selected. If more then 1 error is present, each error may be scrolled through using the arrow keys. Diagnostics information includes Multi-Drop Bus errors and defective or jammed motor codes. All errors are cleared upon exiting the service mode. The following table lists the errors that may be displayed in the diagnostics mode. If no errors are present the display will Prompt **Sr** for service.

Error	Display
Vend motor (T)ime(O)ut	"toXX"
Vend motor (O)ver (C)urrent	"OcXX"
Vend motor (N)ot (H)ome	"nhXX"
3 Items missed by the Golden EYE Sensor	"giE"

Table 3: Fault Chart

Entering one of the service mode numbers below allows access to that service mode. Example: entering 01 will take you into price assignment.

Service Mode Numbers

01 - Price Assignment

Upon entering the price assignment mode 01 the controller will display "Prc" for 2 seconds and then ".". Enter the price to be set using the numeric keypad.

Press \blacksquare and the display will prompt "**S**" for Selection. Enter all the selection numbers to be set at the price entered in the previous step.

Press *H* to enter another price or C to lock in and go back to the service mode.

The maximum price is that can be set at \$99.99 due to the display limitations. (The display format is dependent upon scale factor and decimal point position provided by the credit peripherals connected.)

02 - Test Vend

Upon entering the Test Vend mode 02 the controller will display "SL".

Enter the selection number to be tested. Once the selection is entered, a vend will be attempted. If the vend is successful, the controller display "SL" again. If the selected motor fails, the controller will display "FAiL" for 2 seconds and then display "SL " and wait for another selection to be entered. Test Vend will be turned off automaticly on door closure. Press C or close door to exit.

03 - Multiple Vend Setup

Upon entering the "multi-vend" set up mode 03 the display shows the current "Multi-vend" state. Use *we* key to toggle the "Multi-vend" option between "nul n", n = disabled or "nul Y" = enabled. Multi-vend enabled (nul Y) allows the customer to make additional selections as long as sufficient credit exists to purchase the lowest priced item in the machine. The customer may establish additional credit at any time when in this mode. If the customer presses the Coin Return Lever, the amount of available credit drops below the lowest priced item in the machine (by set price) or a 30 second time-out expires, change is returned regardless of the state of Multiple Vend. Multi-vend disabled ("nul n") will cause the change to be paid back immediately.

Press C or close door to exit.

Multi-Vend State	Display
Multi-vend enabled	"MULy"
Multi-vend disabled	"MULn"

04 - Bill Escrow Setup

Upon entering the "Bill escrow" set up mode 04 the display shows the current "Bill escrow" state. The 🙂 key is used to toggle the "Bill escrow" option between FIRST/LAST/OFF. When Escrow FIRST is enabled the unit shall hold the first bill deposited in escrow until a vend is initiated. Once a vend is initiated the bill must be stacked before the product is dispensed. In this mode only one bill maybe used per vend. With this feature set to LAST all bills are stacked until credit is above the highest vend price if change is available. With escrow OFF all bills accepted will be stacked immediately. Press C or close door to exit.

Bill Escrow State	Display
Bill escrow first	"EScF"
Bill escrow last	"EScL"
Bill escrow disabled	"EScn"

05 - Force Vend Setup

Upon entering the "Force vend" set up mode 05 the display shows the current "Force vend" state. Use the *** key to toggle the "Force vend" option between ON/OFF. When the force vend option is enabled, once credit has reached the lowest vend price set in the machine, the customer must purchase at least one item prior to requesting that any remaining credit be returned. Force Vend does not apply when debit cards are used or if all coins/bills are held in tubes/escrow. Press © or close door to exit.

Force Vend State	Display
Force vend enabled	"Fu Y"
Force vend disabled	"Fu n"

06 - Free Vend Setup

Upon entering the "Free vend" set up (mode 06) the display shows the current "Free vend" state. Use the *key* to toggle the Free vend option between Y (ON) and N (OFF). When the "Free vend" option is enabled, the machine can be vended without credit. **NOTE: If free vend is enabled it will stay enabled until it is disabled. Press C or close door to exit.**

Free Vend State	Display
Free vend enabled	"Fr Y"
Free vend disabled	"Fr n"

07 - Free Vend Coupon Setup

Upon entering the Free Vend Coupon Option code 07 the display shows "Fc__" You can add individual selections by entering the selection numbers on the keypad or entire shelves by entering the shelf number and the * key. Each selection enabled by a coupon is shown in sequence by pressing the **< or >** keys. To remove an entry press the ***** key while the shelf number is being displayed. Press **C** or close door to exit.

08 - Historical Total Value of Sales

Upon entering the Historical Total Value of Sales the display shows the sales displayed as an eight digit number. The eight digits are broken into two, four digit displays. First displayed, are the upper four digits for 2 seconds followed by the lower four (with decimal point location) for 2 seconds. These two fields will alternate every 2 seconds until this mode is exited. Press C or close door to exit.

09 - Historical Total # of Vends

Upon entering the Historical Total # of Vends the display shows the vends displayed as an eight digit number. The eight digits are broken into two, four digit displays. First displayed, are the upper four digits for 2 seconds followed by the lower four (with decimal point in the right most digit) for 2 seconds. These two fields will alternate every 2 seconds until this mode is exited. Press C or close door to exit.

10 - Historical Value of Can Sales

Upon entering the Historical Total Value of Can Sales the display shows the can sales displayed as an eight digit number. The eight digits are broken into two, four digit displays. First displayed, are the upper four digits for 2 seconds followed by the lower four (with decimal point location dependant on the MDB peripherals) for 2 seconds. These two fields will alternate every 2 seconds until this mode is exited. Press C or close door to exit.

11 - Historical # of Can Vends

Upon entering the Historical Total # of Can Vends the display shows the can vends displayed as an eight digit number. The eight digits are broken into two, four digit displays. First displayed, are the upper four digits for 2 seconds followed by the lower four (with decimal point in the right most digit) for 2 seconds. These two fields will alternate every 2 seconds until this mode is exited. Press C or close door to exit.

programming

12 - Historical Value of Sales by Selection

Upon entering Historical Value of Sales by Selection the controller displays "**HuSS**" and waits for a selection to be entered. Once the selection is entered the Historical Value of Sales for that selection is displayed as an eight digit number. The eight digits are broken into two, four digit displays. First displayed, are the upper four digits for 2 seconds followed by the lower four (with decimal point location) for 2 seconds. These two fields will alternate every 2 seconds until this mode is exited or another selection is entered. Press C or close door to exit.

13 - Historical # of Vends by Selection

Upon entering the Historical # of Sales by Selection the controller displays "HnSS" and waits for a selection to be entered. Once the selection is entered the Historical # of Sales for that selection is displayed as an eight digit number. The eight digits are broken into two, four digit displays. First displayed, are the upper four digits for 2 seconds followed by the lower four (with decimal point in the right most digit) for 2 seconds. These two fields will alternate every 2 seconds until this mode is exited or another selection is entered. Press \square or close door to exit.

14 - Set Payback type

Upon entering the "Change Payback" set up mode the display shows the current "Change Payback" state. The # key may then be used to toggle the "Change Payback" option L/3. When the "Change Payback" option is "3", the coin changer decides how to payback the change. If "L" is selected a least coin payback algorithm is used in the Studio Controller.

Change Payback State	Display
3 Change Payback	"3"
Change Payback	"[]"

15300 - Set Serial Number

Upon entering the set Serial Number mode the existing Serial Number is shown if one is programmed. Use the < or > keys to scroll through the existing Serial Number. If a number on the keypad is pressed the display is cleared and the board is ready to accept a new 20 digit Serial Number. Once the Serial Number is entered Press # to lock it in. Press C or close door to exit.

17200 - Set Machine ID

Upon entering the set Machine ID mode the existing Machine ID is shown if one is programmed. Use the < or > keys to scroll through the existing Machine ID. If a number on the keypad is pressed the displayis clear and the board is ready to accept a new 20 digit Machine ID. Once the Machine ID is entered. Press # to lock it in. Press \bigcirc or close door to exit. Press \bigcirc or close door to exit.

18400 - Set Location ID

Upon entering the set Location ID mode the existing Location ID is shown if one is programmed. Use the < or > keys to scroll through the existing Location ID. If a number on the keypad is pressed the displayis clear and the board is ready to accept a new 20 digit Location ID. Once the Location ID is entered. Press # to lock it in. Press \bigcirc or close door to exit.

1923456780 Factory Test

Upon entering the Factory Test, the machine will start testing vend motors in sequence. If a vend motor in sequence is not present or bad the test will stop and the display will flash the bad motor. To continue the test the *#* key must be depressed. Once the factory test is complete all options and prices will be reset to factory defaults. Press *C* or close door to exit.

20 - Golden Eye set up.

Upon entering the Golden Eye Enable Setup code the dispaly shows "giXX". "XX" is the selection enabled for Golden Eye. Each selection effected by a Golden Eye is shown in sequence by depressing the <or> keys. To add selections press the number of the selection to be added to the list. To remove an entry press the *m* key while the selection number is being displayed. The default is all selections turned on.

21 - Number of missed golden eye vends

Upon entering this mode the dispaly shows the Historical Total # of Missed Golden Eye Vends displayed as seven digit number. The seven digits are broken into two, displays. First displayed, are the lower four digits for 2 seconds followed by

Setting Temperatures on Chilled Machines

All machines with a Factory chiller have a Refrigeration Driver Board (RDB) installed in the Power box. This board has two programming buttons and a digital display. In standby the display shows the current temperature in the refrigerated compartment. To set the target temperature, follow the instruction below:

1. Pressing both buttons on the RDB at the same time will toggle the display between °F (Fahrenheit), °C (Celsius) and FA (Fan Adjustment). Releasing the buttons when the display prompts °F or °C respectively allows the target temperature to be set and displayed in Fahrenheit or Celsius. Releasing the buttons when the display says FA allows the Fan speed to be set for the Snack area only in the Studio 4 & 5 machines. NOTE: When in the programming mode there will be a black square (decimal point) in the bottom left corner of the display, during standby the current temperature is displayed.

2. Pressing the left Programming button will increase the set temperature shown on the display.

3. Pressing the right Programming button will decrease the set temperature shown on the display.

4. When you reach the desired temperature, releasing the programming button for 2 seconds will lock it in and the programming decimal point will disappear and the set temperature will be locked.

For more information on the refrigeration system see the Refrigeration Section of this manual.

Studio Series - Software Update Instructions _

Using a new Flash Memory Chip

- 1. Note any required meter readings or options set.
- 2. Turn the power switch off.
- 3. Use a ground strap and proper anti-static procedures to avoid Electro Static Dis charge (ESD) that could damage components on the board.
- 4. Remove all harnesses from the board except the ribbon cable to the Selection Switches (P1).
- 5. Remove the ones screw from board cover located on the top horizontal edge on the board cover.
- 6. Remove the borad cover by lifting the board cover upward over the latches and pulling forward.
- 7. Indentify the empty Flash Memory Socket, and install the revised software.
- Note: Pay special attention to the alignment notch when installing the chip to prevent damage to either the chip or the socket! Three of the corners have square edges and one edge is cut at an angle, the angled corner lines up with the alignment notch as shown. Press the Flash Memory chip firmly into the socket.
- 8. Locate the J1 jumper adjacent to the larger Microprocessor socket. Using a pair of needlenose pliers carefully remove the jumper from its current position by pulling straight out from the board jumper is connecting he bottom and center pin. Install the jumper in the "External" postion, connecting the top and center pins.
- 9. Re-install the board cover and all harnesses.
- 10. Turn the power switch back on.
- 11. Set prices, options, and test.

If the borad already has an unlabled chip in the Flash Memory socket, It should be removed and returned for credit!
